JOB DESCRIPTIONS

ACCOUNT DEVELOPMENT EXECUTIVE

[TIER 7]

Under minimal supervision, the Account Development Executive (ADE) is responsible for generating new sales and increasing sales penetration to existing customers primarily through face-to-face meetings as well telephone and email. The ADE will participate in sales presentations and assist Account Executives with sales presentations as well as coordinate efforts across the sales team. Must have a full understanding of all products and a full understanding of the customer's needs and business requirements, developed through the cultivation of strong business relationships with customers. A ADE is responsible for ensuring that customers are getting the best possible value from their investment in Dow Jones services, up-selling current products, and making sales presentations on new products and services to existing customers. The ADE must lead other members of the sales team on client education initiatives, driving roll out and adoption new services, and identifying and qualifying new sales opportunities within existing customers. ADEs are responsible for providing guidance on best practices to existing customers to ensure continued adoption and use of services resulting in revenue retention. [Exempt.]

ACCOUNT EXECUTIVE

[TIER 6]

Responsible for selling Dow Jones products and services to significant corporate clients within a defined geographic region. Responsibilities include prospecting, demonstrations, account planning/management, negotiations and development of relationships. Also responsible for expanding new opportunities within existing accounts. Requires face-to-face selling skills.

ACCOUNT EXECUTIVE - DIGITAL

[TIER 7]

Working independently, responsible for the WSJ Digital Network. Responsible for partnering with print sales teams on integrated programs. Requires consistent achievement of quarterly sales goals and active management of and prospecting for new clients. Oversees work of Sales Associate and Sales Coordinator. Responsible for RFP direction and final delivery and sell through. Responsibilities include:

- Building relationships and developing agencies and advertisers through cold calls, leads generated by Sales Associate (SA), trade networking events, etc.
- Positioning and selling WSJDN's unique products and services to clients by combining editorial packages with WSJDN's innovative ad solutions.
- Developing proposals, meeting and presenting to clients and closing accounts.
- Maintaining a spreadsheet of active accounts and revenue forecasts.
- Negotiating pricing and placement for sales campaigns. Obtaining credit applications and T&C from clients for internal review and approval.
- Overseeing and developing SA to prioritize tasks, produce consistent deliverables and leverage resources to maximize sales.
- Developing industry expertise and providing sales team with updates on current trends, news, competitive analysis and advertising opportunities.

ACCOUNT EXECUTIVE - PRINT

[TIER 7]

Works independently to sell display advertising in The Wall Street Journal. In addition to selling high impact print campaigns, will also work closely with the digital teams for WSJ.com and Marketwatch.com to craft integrated advertising programs. Requires consistent achievement of quarterly sales goals and active management of existing clients and prospecting for new clients. Oversees work of Sales Associate and Sales Coordinator. Responsible for RFP direction and final delivery and sell through.

Responsibilities include:

- Building relationships and developing agencies and advertisers through cold calls, leads generated by Sales Associate (SA) or Sales Coordinator (SC), trade networking events, etc.
- Positioning and selling WSJ products and services to clients by combining editorial packages with WSJDN's innovative ad solutions.
- Developing proposals, meeting and presenting to clients and closing accounts.
- Maintaining a spreadsheet of active accounts and revenue forecasts.

- Negotiating pricing and placement for sales campaigns.
- Overseeing and developing SA/SC to prioritize tasks, produce consistent deliverables and leverage resources to maximize sales.
- Developing industry expertise and providing sales team with updates on current trends, news, competitive analysis and advertising opportunities.

ACCOUNT MANAGER – DIRECT SALES

[TIER 6]

Under general supervision, the Account Manager – Direct Sales is responsible for managing all aspects of the relationship with a defined set of customers. The Account Manager – Direct Sales is responsible for retaining and growing the existing contract revenue (in existing buying centers) and will also initiate sales activity with new buying centers, either independently, or working with Sales Specialists and/or Senior Sales Executives. Responsible for all areas of account management, including the development of good account understanding, clients’ businesses and resolving issues in a timely manner; understand competitor solutions the client is using and the client’s current and developing needs. The AM-Direct Sales is responsible for ensuring appropriate levels of customer training and awareness. Must identify opportunities for increased revenue within the set of accounts (up-selling and possibly cross-selling) and work with other members of the sales team to follow through on such opportunities. Must maintain accurate and appropriate client records within the Company’s CRM. Ideally, the Account Manager – Direct Sales has a strong understanding of the industries and businesses within the set of customers. The Account Manager – Direct Sales will communicate with clients mainly through telephone and email.

ACCOUNT SERVICES REPRESENTATIVE

[TIER 1]

Under general supervision, initiates new accounts and assists prospects and customers with inquiries concerning Dow Jones Interactive Publishing products and services via telephone, electronic mail and facsimile. Qualifies and recommends information solutions to prospective consumer and corporate customers. Establishes account profiles and performs account maintenance and updates to subscriber information, assists with promotional efforts and responds to requests for general product information, pricing, account cancellation and other account-related issues both verbally and in writing. Performs clerical work as required using order entry systems, personal computer and standard office application software.

ACCOUNT SPECIALIST

[TIER 5]

Provides support to key customers by ensuring proper protocol is followed when accounts are being renewed and new business has been acquired. Creates new trial and sales accounts and coordinates and implements bulk load registrations. Controls the billing process including account creation, modification and cancellation and updates records as appropriate.

ADVERTISING COORDINATOR

[TIER 3]

Under minimum supervision, answers the telephone and gives information to callers. Greets visitors, schedules appointments. Opens, reads and routes mail. Takes advertising space orders over the phone or by mail and inputs them into lineage control system. Handles customer inquiries concerning Dow Jones products, advertising rates, production requirements, acceptance requirements and space availabilities. May be requested to make outgoing calls to clients. Operates News Retrieval and lineage control systems. Identifies and assembles appropriate materials necessary for sales calls and presentations. Will be required to perform secretarial or clerical duties.

ADVERTISING CUSTOMER SERVICE ASSOCIATE

[TIER 3]

Under supervision, communicates with internal and external customers assisting in answering inquiries. Processes contracts, adjustments and updates billing and customer records in our business systems. Additionally processes affidavits, performs research as requested and files and maintains all archival records. May be asked to populate reports and perform related tasks. May provide task-based training for new or existing employees and other related duties as assigned.

ADVERTISING PROCESSING ASSOCIATE

[TIER 3]

Under supervision, accurately processes advertising orders and materials for Dow Jones publications. May typeset and proofread advertisements, and prepare layouts of bannered sections. Reviews orders and materials to ensure compliance with company guidelines and policies. Communicates with internal and external clients. May be asked to populate reports and perform related tasks. May provide task-based training for new or existing employees and other related duties as assigned.

ADVERTISING PROCESSING ASSOCIATE, SENIOR**[TIER 4]**

Under minimum supervision performs all of the duties of an Advertising Processing Associate and in addition may direct the work of Advertising Processing Associates. Requires the use of considerable discretion and judgment.

ADVERTISING QUALITY ASSURANCE ASSOCIATE**[TIER 4]**

Under supervision conducts quality checks on advertising material for Dow Jones publications. May position ads, approve and deliver paginated advertising pages while ensuring compliance with company guidelines and policies. May communicate with internal and external clients. May be asked to populate reports and perform related tasks. May provide task-based training for new or existing employees and other related duties as assigned.

ADVERTISING QUALITY ASSURANCE ASSOCIATE, SENIOR**[TIER 5]**

Under minimum supervision performs all of the duties of an Advertising Quality Assurance Associate and in addition may direct the work of Advertising Quality Assurance Associates. Requires the use of considerable discretion and judgment.

ADVERTISING SERVICES BUREAU ASSOCIATE**[TIER 4]**

Works generally with minimal supervision, this position has some latitude for un-reviewed action or decisions. Must have the ability to self-start and have strong multitasking skills. Develop contacts in Production/Traffic departments of agencies. Assist sales with client calls and on-site visits. Requires knowledge of print production issues, layout knowledge and department reference publications. Excellent customer service and communication skills. Working knowledge of ad trafficking and production systems.

ANALYST, FMA, ACCOUNTING, SR.**[TIER 6]**

Under minimal supervision, performs monthly closing tasks in order to produce the Balance sheet, Income Statement and the Statement of Cash Flow; prepares monthly analysis of operating results for senior management and line managers; analyzes and evaluates actual results versus the budget and/or outlook and prior year; completes balance sheet account reconciliations and analysis and works with other groups of finance to provide insight into the balances remaining; prepares budget/outlook for the statement of cash flow by using balance sheet knowledge to predict future fluxes; works with external auditors to complete quarterly reviews and annual audits of results; completes annual Sarbanes-Oxley testing; and devises and completes any additional special projects. Assignments are broad in nature, usually requiring appreciable originality and ingenuity, as well as team work and the ability to meet the many competing deadlines.

ANALYST, FMA, MIG, SR.**[TIER 6]**

Under general direction, supports finance application end users to ensure all business reporting requirements are met and reports are delivered in a timely manner. Coordinate with IT to maintain and monitor overnight processes in connection with monthly close, forecast and budget processes. Partner with other areas of finance to provide process automation. Must be able to utilize advanced excel skills and demonstrate proficiency in data management.

ANALYST, GFO, AP**[TIER 5]**

Under direction, the Analyst, GFO, AP will perform a variety of duties relating to accounts payable work. Must have full knowledge and understanding of the department's policies and procedures. At times will be responsible for preparing reports, preparing reconciliations, and checking for accuracy of data. The analyst will also assist in responding to inquiries regarding outstanding payments, open invoices or general vendor inquiries. May work independently on specific special assignments, as required, along with assisting our internal business customer on queries.

ANALYST, GFO, AR**[TIER 5]**

Under supervision, responsible for the accurate and timely processing and recording of customer payments and resolution of unapplied cash items according to established policies and procedures. Responsible for reconciliation of bank account statements. Responsible for researching and troubleshooting discrepancies in payments and accounts and reconciling records, including the general ledger. Will support all compliance and audit requirements and assist with internal audits and investigations of accounts.

ANALYST, GFO, BILLING**[TIER 5]**

The Analyst, GFO, Billing performs all invoicing functions, including but not limited to billing, adjustments, reconciliations, balancing, researching and customer service related activities supporting the Company's business operations. This role will create manual invoices, proformas and adjustments and will ensure that billing cycles are handled efficiently and accurately. The role will research and resolve all errors and discrepancies and will troubleshoot as necessary. The role must maintain positive business relationships with internal and external customers and establish and ensure compliance with standard procedures and/or written instructions to promote Company goals.

ANALYST, GFO, BILLING, SR.**[TIER 6]**

The Sr Analyst, GFO, Billing performs all duties of the Analyst, GFO, Billing but under limited supervision will also identify inefficiencies, create new processes, checks own work for completeness.

ANALYST, GFO, BILLING SYSTEMS, SR.**[TIER 6]**

Under minimal supervision, performs analysis, documentation, testing and on-going support for Billing systems. Works closely with business partners to identify billing and accounting business requirements and processes. Maintains effective communication with the IT teams and business partners for billing products and services. Analyze and test automated billing solutions to business system problems. Supports quality assurance/testing efforts with hands on support. Participates in development and execution of test plans. Respond to inquiries and provides status on billing problem resolutions.

ANALYST, GFO, COLLECTIONS**[TIER 5]**

Involves developing news products that make use of various Dow Jones news content combined with different applications or third party content, sometimes making use but not limited to quantitative and qualitative news analysis methodologies. Will work closely with customer-facing and internal teams such as technology and editorial staff. Experience in understanding how news is produced and used is vital. This knowledge is critical in creating new products and enhancing current offerings. Typical responsibilities may include:

- Provide functional and domain expertise during product development project ensuring alignment with business requirements
- Develop project business requirements and collaborate with technology, editorial, business development and sales as well as other operational partners to develop product specifications and build product/applications
- Analyze financial/market news to identify key components
- Assist in any related product or market research initiatives
- Assist in development of new products and/or enhancements
- Coordinate testing and deployment of capabilities, data and related tools
- Run or assist in product orientation sessions with Sales/Marketing.

PRODUCT SPECIALIST

[TIER 4]

Under minimal supervision, provides internal and external support to the Enterprise Sales team, including the preparation of training and sales materials for customers, prospects, and internal sales staff. Will function as an expert on designated products in the Enterprise Solutions Group. Will make presentations to customers and prospects about product capabilities and roadmaps and reinforce the value proposition through an in-depth understanding of the solutions, and how the customer uses them. May include both face-to-face and telephone communications and presentations. Collaborate with Sales to ensure that customer and prospect feedback is captured and acted on as needed. Must acquire significant knowledge of the end users and the environment in which they operate, their challenges, information needs, and commonly used solutions, and transfer knowledge to other departments and teams. May also be responsible for targeted internal and external training sessions and/or ongoing client communication strategies (in conjunction with Marketing and/or Customer Service) and may participate in product marketing activities.

PRODUCT TESTING ANALYST

[TIER 4]

Measures and controls the quality of products by identifying defects, correcting deficiencies in quality and preventing defects through testing techniques. Creates and executes test scripts, performs free-form testing, gathers and analyzes beta tester feedback and analyzes defects and defect reports. Acts as defect tracker and report writer. With sufficient experience, will have the opportunity to assist in writing test plans; interact more with developers regarding defects and project status; assist in coordinating beta testing planning and implementation and train entry-level analysts in testing methods and procedures.

PRODUCT TESTING ANALYST, LEAD

[TIER 8]

Under minimum direction, performs all the functions of a Senior Product Testing Analyst, and also acts as lead in all assigned DJIP product test efforts. This includes working with product managers to facilitate the creation of test scripts, executing free-form and/or automated testing, and the analysis of defects. Informs management of the status of testing and the details for specific defects, when required. Provides management with input regarding new test techniques, tools, and recommendations to improve testing efficiency. Requires an in-depth knowledge of testing techniques and methodologies for both client server and internet based products; ability to work on multiple projects at one time; knowledge of browsers, HTML and Windows.

PRODUCT TESTING ANALYST, SENIOR

[TIER 6]

Under limited supervision, performs all the functions of a Product Testing Analyst, and also assists lead testing analyst and/or project manager in coordinating testing activities. This includes performing browser compatibility testing; writing and

executing test scripts; executing regression test suites; performing defect tracking; assists in the preparation of test plans and provides input to test release notifications. Knowledge of testing techniques and methodologies for both client server and internet based products; knowledge of browsers, HTML and Windows. Product Testing Analyst is promotable to this position.

PRODUCTION COORDINATOR

[TIER 4]

Under general supervision, ensures that all advertisements are scheduled for publication and verifies run of ads. Responsible for communication with advertisers and advertising partners regarding orders, changes, etc. regarding ads. Reviews actual ads run and verifies against schedule. Reviews and verifies orders received via electronic systems. Prepares standard contracts for submission to agencies and clients and processes signed contracts. Coordinates with billing department as necessary. Processes tearsheets. Prepares and updates weekly revenue projections. Other related work as assigned.

RADIO CORRESPONDENT

[TIER 9]

Responsible for producing audio content for the radio network and Web site, and delivers newscasts for local stations and a national radio network. Works independently and responsibly, without editorial supervision. Writes, produces and broadcasts accurate and timely business reports. Initiates and conducts newsmaker interviews with stock market commentators, industry and company brokerage analysts, newsmakers and correspondents, depending on the news flow for the day. Then records and edits those interviews for broadcast and makes available for access via the Web and other electronic distribution channels.

RECEPTIONIST

[TIER 1]

Greets, screens and directs callers. Must have sufficient knowledge of organization, business and personnel to answer routine inquiries. May route special mail and telegrams. May assist with product sales. May also perform other clerical work as assigned.

REGIONAL SALES COORDINATOR

[TIER 3]

Under general supervision, the Regional Sales Coordinator (RSC) works closely with the regional sales team to ensure that clients experience a first class relationship with Dow Jones and supports the smooth operations of regional sales. The RSC works closely with the Senior Relationship Managers, Senior Sales Executives, and Customer Value Executives in support of sales activities, contracting, setup of client accounts, and ongoing account changes. Additional responsibilities may include working directly with clients to resolve ongoing account issues such as change requests and invoicing questions, working with sales management to help coordinate team initiatives (such as campaigns or events), and working with the local team to assist with account usage, billing or other data analysis. An RSC may be responsible for Compiling regular or ad-hoc reports on account usage, billing, and vendor business, preparing user or usage reporting in partnership with local account teams, partnering with the local account teams to resolve billing issues, assisting in making manual adjustments and processing requests for manual invoicing, and calculating and processing credit and debit adjustments. Also responsible for account set-up, communicating with customers and vendors, and assisting with strategic projects to support the sales team. [Non-exempt.]

RELATIONSHIP MANAGER

[TIER 6]

Under general supervision, the Relationship Manager (RM) is responsible for managing all aspects of the relationship with a defined set of customers. The Relationship Manager is responsible for retaining and growing the existing contract revenue (in existing buying centers) and will also initiate sales activity with new buying centers, either independently, or working with Sales Specialists and/or Senior Sales Executives. Responsible for all areas of account management, including the development of good account understanding, understanding clients' businesses and resolving issues in a timely manner; understand competitor solutions the client is using and the client's current and developing needs. Responsible for ensuring appropriate levels of customer training and awareness. Must identify opportunities for increased revenue within the set of accounts (up-selling and possibly cross-selling) and work with other members of the sales team to follow through on such opportunities. Must maintain accurate and appropriate client records within the Company's systems. The RM must have a strong understanding of the industries and businesses within the set of customers. The RM will communicate with clients mainly via telephone and email. [Non-exempt.]

RELATIONSHIP MANAGER, SENIOR**[TIER 9]**

Working independently and under minimal supervision, an SRM responsible for managing a designated set of major accounts, and is responsible for retaining them and growing the revenue from them by identifying opportunities with new buying centers. An SRM may work in tandem with Senior Sales Specialists, Senior Sales Executives, and Solutions Architects. The SRM is responsible for all aspects of the relationship with a defined set of major customers. An SRM will meet face-to-face with clients and will supplement with telephone and email. An SRM must retain business within the established customer base and ensure that the value of Dow Jones solutions are clearly articulated. An SRM is responsible for retaining contract revenue, ensuring that Dow Jones products continue to address the customer's needs, and maintain high customer satisfaction levels. SRMs are responsible for securing renewal of business and all aspects of account management, as well as developing new opportunities. An SRM will work closely with Senior Sales Executives and Sales Specialists when pitching new business opportunities to existing clients. Must have a strong knowledge of all products and solutions. May be required to produce reports and forecasts regarding sales opportunities. Must maintain accurate client information and data. [Exempt.]

REPORTER**[REPORTER TIER]**

Must be able to develop, report and write major spot news and feature stories for a Dow Jones publication and/or a Dow Jones news service in finished form, so that no major rewrite is required and no extensive additional reporting is needed.

REPORTER/TAPE EDITOR**[TIER 6]**

Records information from various sources and edits recordings for news value and continuity. Also types list and "verbatim" of each "actuality cut" and types labels for cartridges.

REPORTING ASSISTANT**[TIER 4]**

Under minimum supervision, writes brief and routine news stories, performs simple editing and rewrite duties and prepares statistical material for publication. Handles routine telephone inquiries. May be required to assist reporters in gathering news or assist in performing national copyreader duties.

It is not intended that employees in this classification be required to perform the full duties and responsibilities of Reporter or National Copyreader.

RESEARCH EDITOR**[TIER 4]**

The role of the Research Editor is to support the Desk Editor in implementing and maintaining the Risk & Compliance content. Specifically, the Research Editor shall carry out systematic and exhaustive searches on Factiva products and other publicly available sources to gather all available information on certain individuals and/or entities and check the accuracy of such information before entering it into the database. The Research Editor shall then enter such information into the database using the editorial application system and apply classification tags that enable extraction of relational groups. The Research Editor shall be responsible for the quality of records in his/her remit, processing any corrections that are highlighted in quality checks. The Research Editor shall also operate tracking systems to capture changes and write Due Diligence reports as and when required on an ad-hoc basis.

RESEARCH SPECIALIST**[TIER 6]**

Under some supervision, provides customer support via telephone and e-support to customers requiring research assistance for the Dow Jones suite of products. Such support includes advising customers on search strategies and indexing as well as basic technical and content issues. Provides first level support for the Dow Jones suite of products when needed. Responsible for thorough and timely consultation on customer inquiries. Creates and maintains search strategies based on customers' ongoing needs. Assists in the creation of search query libraries for both internal and external use. Responsible for encouraging and increasing product usage across account base, improving customer retention, and identifying opportunities to be shared with Sales. May be assigned to work with specific customers as a designated resource. May also be assigned to work on special projects relating to searching and content for internal Dow Jones teams such as the Product team. Tracks progress of outstanding incidents to ensure customers get accurate and timely updates and resolution. Escalates customer issues to the appropriate departments, ensuring that issues are handled and resolved in a timely manner. Participate in activities that improve the overall customer experience such as mentoring, focus groups and training.

RETAIL CHECKER**[TIER 1]**

Monitors sales at retail sales locations. Places and improves point-of-sale displays at retail locations. Looks for potential new retail outlet locations. Monitors delivery and wholesaler performance.

ROTATION ASSOCIATE**[TIER 2]**

Under close supervision, a Rotation Associate will rotate between various Departments and teams to learn the intricacies of the company and bring fresh eyes to current challenges. Responsible for listening to concerns and complaints of our clients and working with colleagues to formulate solutions. Rotations are typically three months, during which the Rotation Associate will work in several key areas of a group. May participate in sales, marketing, product development, customer service, and other activities as part of rotations. Will be required to participate in multiple projects simultaneously. The expectation is that at the conclusion of the rotations the employee will be placed into one particular Department and group as an indefinite employee.

SALES ASSOCIATE**[TIER 5]**

Under minimal supervision, responsible for partnering with Account Executives on integrated sales programs. Responsible for selling display, high impact and stand-alone online advertising. This position supports the Account Executives to prepare proposals, generate leads, facilitate front-end account maintenance throughout the campaign, and sell to clients within the assigned territory to achieve quarterly revenue goals. Responsibilities include:

- Drafting proposals and RFPs for presentations to clients; arranging client meetings and follow-ups.
- Generating and qualifying leads consisting of Tier 1 and Tier 2 decision makers within the assigned territory through research, trade references and cold calls.
- Outbound telemarketing, prospecting and selling to targets determined by AE and Director.
- Communicating and following-up with clients and internal departments regarding live campaigns to address any concerns.
- Reviewing monthly Revenue Sheets to ensure all placements have been properly delivered per the IO and revenue has been appropriately recognized; alerting the Finance Department of any issues to be resolved.
- Acquiring proper internal and client approvals to process documents for optimizations, revisions, makegoods, cancellations, and renewals.
- Researching user data and audience metrics via research tools such as AdRelevance, @Plan, Digimine, Hoovers, etc. for preparing proposals as needed.
- Emersion into the print industry events and functions representing The Wall Street Journal

SALES COORDINATOR**[TIER 3]**

Under general supervision, supports the ad sales team both print and online. Working with a fast paced multimedia sales team, Sales Coordinators partner on integrated programs as well as high impact campaigns and stand-alone online sales. Position supports the assigned Sales Associate (SA)/Account Executive (AE) teams to process incoming Insertion Orders (IOs), back-end account maintenance and continuously monitor live campaigns to gauge delivery success. Responsibilities may include Supporting sales team, securing space availabilities and reservations, entering IOs to reserve inventory for incoming accounts, preparing reports used by management and sales teams for forecasting, analysis, and budgeting, assisting with research for proposals and special projects, ensuring that the sales team has the required sales materials and support information for sales calls and RFP responses, acting as a liaison between advertisers and agencies to verify insertion dates, rates and secure ad materials, and passing along critical information including signed contracts to the post-sales support team.

SALES ENGINEER**[TIER 10]**

Serves as the primary client-facing product and technology expert for ALGO and other Dow Jones products. Works in partnership with Sales team toward common Sales and client relationship goals. Provides product expertise and technical support for Sales team and client throughout the sales cycle, including product implementation and post-sale usage. Develops strategies and solutions for integrating Dow Jones products into client systems and workflow processes. Communicates clearly about product features and in-depth technology capabilities, and keeps customers apprised of new product enhancements. Develops, maintains and communicates expertise on an array of Dow Jones products, and on trading platforms and systems generally, for the purpose of identifying and pursuing cross-selling opportunities.

SALES EXECUTIVE**[TIER 6]**

Under minimal supervision, the Sales Executive (SE) will drive new business revenue from “new to company” prospects (which currently have no business relationship with Dow Jones). The SE position is an outside sales position, primarily involving direct face-to-face meetings with prospective clients, but may include some preliminary communication via telephone and email. Must have a strong knowledge of the core Dow Jones products. An SE is responsible for conducting market analysis and self-identifying prospective sales targets, acquiring knowledge of the target businesses, preparing presentations, making contact, and closing sales. Is responsible for maintaining records of sales activities and calls and entering data into Dow Jones systems. [Exempt.]

SALES EXECUTIVE, SENIOR**[TIER 9]**

Working independently and under minimal supervision, responsible for driving new business revenue from prospects and existing Dow Jones customers. Requires face-to-face meetings, supplemented by telephone and email contacts with clients and prospective clients. May involve working in partnership with Senior Relationship Managers and Relationship Managers and may involve partnering with Sales Specialists to secure new business. Must sell the full suite of Dow Jones core solutions. An SSE is responsible for generating new revenue streams, identifying potential target prospects, including identifying the specific individuals and roles within a target organization to be contacted. Must analyze and evaluate needs of the prospective clients, prepare presentations emphasizing the value of the Dow Jones products, make contacts, and close sales. Is responsible for tracking sales activity and recording sales data, and must take an active role in developing and partnering with others in the sales organization. [Exempt.]

SALES PLANNER**[Tier 5]**

Under minimal supervision, partners with other members of the sales team to maximize sales opportunities and produce exceptional sales plans. Assists with the preparation of RFP submission by providing proposal ideas and inventory solutions that best meet the client objectives, while maintaining pricing integrity and inventory package strategy. Produces sales proposals in the order management system. Researches industry insights across brands and publishers. Responsible for reserving campaigns in the order management system once a deal is approved. Works with the sales and campaign management teams to timely launch campaigns. Researches historical data to support strategic decisions about new sales programs.

SALES SPECIALIST**[TIER 9]**

Under minimal supervision, the Sales Specialist drives new business revenue by direct selling into new buying centers for existing Dow Jones customers, or extending the Dow Jones solutions being used by these customers. In addition, the Sales Specialist will sell into "new to company" prospects (which currently have no business relationship with Dow Jones) and is responsible for client/business retention. Must consistently communicate with end users and sponsors, training and demonstrating the product value proposition in a way that resonates with the customer. In doing so, they will identify and pursue any selling opportunities (new, cross-sell, up-sell), or mitigate any retention risks in conjunction with the relevant regional Relationship Manager, Senior Relationship Managers or Global Account Manager. Also is responsible for developing and leading training initiatives to ensure 100% adoption of the service.

SALES SPECIALIST, SENIOR**[TIER 10]**

Working independently, the Senior Sales Specialist (SSS) is responsible for generating new business revenue. An SSS may be assigned to a specific business segment or geographic region. Responsible for selling into new buying centers for existing customers and selling additional products to existing customers, as well as identifying and selling to new customers. Must work in partnership with other members of the sales team when appropriate. Responsible for deep understanding of the applicable business segment and for developing and executing sales strategies targeted to that business segment. Responsible for keeping records of sales activities, prospects, and sales and entering data into the Company's systems as directed. Requires deep knowledge of all Dow Jones products and services. The SSS is primarily an outside sales person, communicating with prospects via face-to-face meetings as well as via telephone and email. [Exempt.]

SECRETARY**[TIER 2]**

Under supervision, answers telephones and gives information to callers. Greets visitors, schedules appointments, opens, reads and routes mail, takes dictation and transcribes notes, composes and types routine correspondence, files correspondence and other records. May make reservations and travel arrangements. May compile and type statistical reports. Otherwise

relieves supervisor of clerical work and minor administrative and business detail. Must be versed in common business terminology and be able to take dictation at 120wpm and type at 60wpm. May be required to use copying machines and prepare outgoing mail, using postage-metering machine.

SERVICE PERFORMANCE ANALYST

TIER 3

Under Supervision, responsible for developing and providing reporting and relevant management information to all areas of the business. This includes static and scheduled reporting and the analysis, evaluation and documentation of business requirements for new and existing reports and processes, and improving the systems / processes currently in place. Will support the Service Performance Manager in delivery of their key responsibilities. Will Deliver Reports and Analysis within agreed Service Level Agreements. Supports stakeholders in the understanding and application of performance statistics. Highlight trends to management. Designing and developing timely, accurate and appropriate management information/business intelligence for distribution to internal stakeholders. Update and maintain relevant working tools and materials. Undertake quality control and accuracy checks/audits. Monitor and report on performance against internal and external Service Level Agreements. Maintain Management information systems – contribute to the design and implementation of operational management information systems. Design, research and build presentations for Departmental managers to interface with the wider business. Supporting projects by providing reports and analysis to measure the success of new initiatives

SERVICE TEAM SPECIALIST

[Tier 3]

Under minimal supervision, responsible for responding to escalated questions concerning core processes, workflow, and responsibilities. May handle internal/external customer and/or vendor contacts, which may include elevated/urgent issue resolution. Maintains and distributes reports to management detailing status of work in progress, completed work, and quality scores. Collaborates with other groups to ensure timely work flow. Acts as liaison with IT on systems integrity, maintenance, implementation of new procedures, and testing issues. Provides coaching and training to new or existing staff. Assumes team leader responsibilities when necessary. Maintains productivity and quality requirements as related to business unit goals.

SOLUTION ARCHITECT

[TIER 9]

Drives new business revenue by identifying opportunities, participating in pre-sales calls and presentations, writing proposals and providing subject-matter expertise to assist the Account team with rapid completion of the sales cycle for Factiva Insight, Factiva's new suite of products for media monitoring and management. Responsible for managing the complete solutions sales cycle including working with customers, prospects, and various strategic consulting staff (such as Consultants and Project Managers) from first appointment through to implementation including designing and presenting appropriate media monitoring and reputation management solutions to customers and prospects. Ensures that proposed Factiva Insight solutions are architecturally sound and fall within the Practice's strategic direction.

SPECIAL WRITER

[TIER 9]

Reporters and copy editors may qualify for these classifications if they possess, in the opinion of management: Marked creative writing ability; ability to perform duties with minimal supervision and originality and initiative in developing news coverage in the fields assigned; ability to supervise the work of other reporters, copy readers or copy editors and edit, process and rewrite news material.

SPECIAL WRITER/NEWS DESK

[TIER 9]

Reporters and copy editors may qualify for this classifications if they possess, in the opinion of management: Marked creative writing ability; ability to perform duties with minimal supervision and originality and initiative in developing news coverage in the fields assigned; ability to supervise the work of other reporters, copy readers or copy editors and edit, process and rewrite news material and if assigned to the News Desk. [Non-exempt.]

SPECIAL WRITER, SENIOR

[TIER 10]

Reporters and copy editors may qualify for these classifications if they possess, in the opinion of management: Marked creative writing ability; ability to perform duties with minimal supervision and originality and initiative in developing news coverage in the fields assigned; ability to supervise the work of other reporters, copy readers or copy editors and edit, process and rewrite news material.

SPECIALIST, GREF, MAILROOM**[Tier 1A]**

Opens and sorts incoming mail and inter-office papers for distribution; collects and prepares outgoing letters, packages, etc., for mailing. Determines postage requirements and affixes stamps. May operate machines such as letter opener, sealer, stamper, bundler. Keeps reports on postage. Distributes incoming and inter-office mail. May perform related clerical duties such as counting and filing. May deliver and pick-up mail at post office. May drive vehicle.

SPECIALIST, GREF, MAINTENANCE**[TIER 2]**

Under supervision, maintains and keeps in a clean and orderly condition the production and office areas of Company buildings. Performs such other related duties as may be assigned by the supervisor.

STAFF ASSISTANT I**[TIER 2]**

Under minimum supervision, performs specified duties of some diversity related to the department's activities. Involves some independent judgment and a detailed knowledge of the department or company policies. Maintains records and prepares reports as needed. May be required to perform functions similar to a Senior Clerk.

STAFF ASSISTANT II**[TIER 5]**

Under direction, performs a variety of duties within a department involving independent judgment and initiative. Must have full knowledge and understanding of the department's policies and procedures acquired through extended on-the-job experience or formal training. May work independently on specific assignments with responsibility for completion of projects assigned. Maintains records and prepares reports as needed. May perform functions similar to Staff Assistant I.

STAFF WRITER (BARRON'S)**[TIER 9]**

Reporters and copy editors for Barron's may qualify for this classification if they possess, in the opinion of management: Marked creative writing ability; ability to perform duties with minimal supervision and originality and initiative in developing news coverage in the fields assigned; ability to supervise the work of other reporters, copy readers or copy editors and edit, process and rewrite news material.

SYMBOLY AND CODING ANALYST**[TIER 5]**

Responsibilities:

- Administer the acquisition and maintenance of local and financial market symbology derived from multiple sources and stored in proprietary databases.
- Use internally-generated reports and perform external research to validate existing symbology data.
- Use proprietary symbology tools to create and update symbology records requiring edits.
- Generate and deliver symbology reports and reference files as required by the organization.
- Provide timely and complete resolution of ad-hoc internal and external symbology queries.
- Consult with other areas of the organization which consume symbology to deliver information and expertise in support of company objectives.
- Perform UAT (user acceptance testing) of new or enhanced system functionality.
- Support training of future members of staff.

Position Requirements:

- Bachelor's degree or equivalent experience
- Excellent verbal and written communication skills
- Understanding of symbology data maintenance practices, including research and validation
- Understanding of the financial markets helpful
- Attention to detail
- Ability to meet tight deadlines
- Proficiency in Microsoft Excel, Word, and Outlook

SYMBOLY AND CODING ANALYST, SENIOR**[TIER 6]**

Responsibilities:

- Administer the acquisition and maintenance of local and financial market symbology derived from multiple sources and stored in proprietary databases.
- Use internally-generated reports and perform external research to validate existing symbology data.
- Use proprietary symbology tools to create and update symbology and financial data records requiring edits.
- Generate and deliver symbology reports and reference files as required by the organization.
- Consult with Symbology leadership to cultivate new strategies for symbology maintenance and effective collaborations with the larger organization.
- Provide timely and complete resolution of ad-hoc internal and external symbology queries.
- Consult with other areas of the organization which consume symbology to deliver information and expertise in support of company objectives.
- Perform UAT (user acceptance testing) of new or enhanced system functionality.
- Support training of future members of staff.

Position Requirements:

- Bachelor's degree or equivalent experience
- Excellent verbal and written communication skills
- 3+ years' experience with symbology data maintenance, including a strong understanding of research and validation practices
- Strong understanding of the financial markets
- Attention to detail
- Ability to meet tight deadlines
- Proficiency in Microsoft Excel, Word, and Outlook

SYSTEM SUPPORT OPERATOR

[TIER 2]

Under supervision responsible for some or all of:

- Start up, operation and shut down of electronic and electromechanical Systems used to produce corporate publications or products.
- Preparation and maintenance of film and/or plate chemicals.
- Check content against a confirmation report for negatives/plates.
- Negative stripping and opaquing.
- Maintaining accurate logs and records.
- Notifies management and customers of network/System troubles through a tiered notification and escalation process.
- Punching of plates and/or film.
- Operating plate exposure system.
- Operate image transfer System, image setters, and or proofing System.

TECHNICAL ANALYST

[TIER 7]

Under minimal supervision and frequently working independently, responsible for developing and implementing reporting and data solutions to assist Data Strategy in reporting, analytics and workflow solutions, including developing custom user interfaces. Will identify and develop workflow process improvements and system automation strategies to manage data efficiently. Responsible for creating high-quality custom reports, analysis, insight, perspective, and visualizations to clients, partners, and internal users by using advanced database querying and data analysis techniques. Must have proficiency in a variety of coding languages and advanced Excel skills.

TRANSLATION EDITOR

[TIER 7]

Under general supervision, must be capable of translating copy, charts and graphics. Must be capable of selecting, summarizing, translating and editing articles, "What's News" briefs and graphics, and rewriting column items. Must be capable of giving a target market angle to articles which may require some reporting. Must also be able to write headlines, review wires and select and write regional "What's News" summaries in the chosen language, in addition to proofreading articles translated and edited by others.

USER EXPERIENCE ARCHITECT, SENIOR

[Tier 8]

The Senior User Experience Architect partners with a team of designers, business segment strategists and technology teams to create and produce next generation solutions for the Company's Business to Business products and other lines of business. Using analyses of customer needs and competing products, the role creates detailed site maps, wireframes and related documentation of role and goal based solutions addressing product, business, user and functional requirements. The role interfaces with both internal and external clients to organize and conduct research tasks, including but not limited to focus groups, usability testing and market validation. The role works closely with the Product and Engineering teams to translate IA documentation into completed applications and provides subject matter expertise to product strategy discussions.

USER EXPERIENCE DESIGNER

[Tier 8]

Under minimal supervision, responsible for providing design guidance that fosters a shared understanding of the customer-centric intersection between design, content, business and marketing values. Must act as a liaison between business and technological stakeholders, software architects, and developers. Responsible for initial design proposals for consumer products. Responsible for assisting in the design and implementation of testing practices. Suggests appropriate topography, design, and layout in order to simplify user experience. Position is equal parts designer, usability professional, and product thinker. Requires advanced knowledge of graphic design, interaction design, interface design, or information architecture, as well as skill in typography and layout.

USER EXPERIENCE DESIGNER, SENIOR

[Tier 9]

Working Independently and in cooperation with others, responsible for providing design guidance that fosters a shared understanding of the customer-centric intersection between design, content, business and marketing values. Will be responsible for leading the design process for consumer product development. Responsible for making presentations to internal and external groups. Must act as a liaison between business and technological stakeholders, software architects, and developers. Responsible for initial design proposals for consumer products. Responsible for assisting in the design and implementation of testing practices. Suggests appropriate topography, design, and layout in order to simplify user experience. Position is equal parts designer, usability professional, and product thinker. Requires advanced knowledge of graphic design, interaction design, interface design, or information architecture, as well as skill in typography and layout.

VIDEO JOURNALIST

[Tier 7]

With minimal supervision, must be able to develop, report, write, shoot, edit, and produce feature video stories and breaking news video for Dow Jones publications, platforms, and services, including WSJ.com and social media, in finished form, so that no major rewrite is required and no extensive additional reporting is needed. May include working on packages independently, but often requires working in teams with other journalists. Responsible for working with other departments to develop story/package ideas to run independently or in tandem with print stories, and must work with all other departments to promote video content across platforms. {overtime exempt}

VIDEO JOURNALIST, SENIOR

[Tier 8]

In addition to performing all the duties of a Video Journalist, responsible for coaching and training print reporter-shooters through the video process, developing shot lists, and advising on shooting and writing scripts. The Senior Video Journalist also communicates with senior management and other department managers on videos available for promotion and helps promote video across platforms, including WSJ.com and social media. {overtime exempt}

WEB DEVELOPER

[Tier 8]

Under minimal supervision, is responsible for designing and writing code to support Dow Jones products. This includes, but is not limited to, websites, back end systems, databases, and mobile initiatives. Web Developers must be proficient in a variety of technologies, which may include J2EE, .Net, EidosMedia Content Management System, XML and JavaScript. Web Developers are responsible for upgrading and enhancing websites to meet business needs, and may participate in proposing and assessing new software and functionality. Must be able to understand and map user and business driven requirements to the technologies needed to support them. Must work closely with information architects and business analysts on website projects.

YIELD ANALYST**[Tier 5]**

Under minimal supervision, responsible for compiling, analyzing and reporting on online pricing and inventory trends to support key decisions about the company's sales programs and to understand past performance. Responsibilities span the sales, operations, and yield management departments of Wall Street Journal Digital Network. The focus of this position is to provide both ad hoc, and scheduled reporting on revenue and delivery across all online products and placements for all departments within the organization. Essential functions include analyzing sales data in order to price and forecast digital inventory across multiple platforms, collaborating with sales teams, site general managers and other users to provide KPI reporting, and provide analytic support to those groups, partnering with salespeople on RFPs to best manage pricing and inventory decisions, analyzing sales data to report on financial and industry trends that drive revenue and communicate complex analysis to senior management, working with the Ad Sales Product Managers to determine effectiveness of product sales to support decision making for all new products and packages, ad hoc projects and analytics to assist management in evaluating various business opportunities, collaborating with both Ad Sales and Ad Operations to assist in client optimizations so that revenue is maintained. Must have excellent communications skills and be adept at working in group environment.

INFORMATION TECHNOLOGY JOBS

PRODUCTION CATEGORY

This category includes job descriptions, which are involved in to day to day operation of data centers and their support.

Operations Analyst, Senior	Tier 3
Operations Analyst	Tier 2
Data Center Specialist	Tier 1A
Computer Operator, Senior	Tier 1
Computer Operator	Tier 1A

Individuals in this group may advance to other positions in the IT matrix. These may include the Customer Service, Network and Technical Categories.

Computer Operator – Tier 1A

Overtime Status: Non-Exempt

Under supervision, monitors and performs error detection for production and non-production systems and application. Performs problem notification, generates trouble tickets on events, prepares daily reports, logs, problems and changes. Operates peripheral equipment.

Overall responsibilities are:

- Monitor system and application performance and availability.
- Perform problem notification and escalation.
- Generate reports, logs, and trouble tickets on events, problems and changes.
- Operate peripheral equipment.

Computer Operator, Senior – Tier 1

Overtime Status: Non-Exempt

Under supervision, monitors and performs error detection, problem determination & troubleshooting for production and non-production systems, application and data communications. Performs problem notification, generates trouble tickets on events. Provides phone support to customers, vendors and interfaces with other departments. Provides orientation training and guidance to new staff members. Monitoring system and application performance availability.

Overall responsibilities are:

- Performs problem determination and troubleshooting for systems, applications and data communications through the use of standard Enterprise Tools.
- Performs escalation notifications to appropriate personnel for support on problems that can't be solved by a standard operational procedure.
- Acts as interface to all outside departments and vendors for problem reporting or initial troubleshooting.
- Generates trouble tickets on events and problems.
- Produces shift turnover documenting changes, problems & outages.
- Provides phone support to customers and vendors.
- Provides orientation training and guidance to new staff members

Data Center Specialist – Tier 1A

Overtime Status: Non-Exempt

Under supervision, responsible for one or more of the following:

- Validating and scheduling of changes.
- Creating automated problem/change reports.
- Operating peripheral equipment.
- Maintain and review job-scheduling systems.
- Performing the required tape media maintenance: data collection, data retention, file maintenance, maintenance of tape library and inventory, general maintenance of tape media, and off-site vaulting.
- Performs user Administration of report distribution
- Using specialized software build, modify, generate form overlays

Operation Analyst – Tier 2

Overtime Status: Non-Exempt

Under minimal supervision, provides system and application detection and recovery of product outages, problems, and faults utilizing specialized tools and technologies across multiple business units. Performs escalation notifications to management and support staff on problems that can't be resolved by standard operational procedure. Provides phone support to customers, vendors and interfaces with other departments. Responsible for ensuring that trouble tickets, daily reports, logs and changes are completed on each shift. Identifies exposures and works on improvements, automates manual tasks and generates recovery procedures. Provides training and guidance to technical staff. In addition to the responsibilities of lower tier is also responsible for the following:

Overall responsibilities are:

- Provide system and application detection and recovery of product outages, problems, and faults utilizing specialized tools.
- Generates reports, logs, trouble tickets on events, problems and changes.
- Identify and work on improvements to problem detection, recovery, and escalation notification and procedures.
- Performs escalation notifications to appropriate personnel for support on problems that can't be solved by a standard operational procedure.
- Implement and verify scheduled system and application changes & application tasks.
- Perform problem notification to management, support staff, and customers.
- Automating tasks and generating recovery procedures.
- Participates in product problem change review meetings and activities.
- Provides training and guidance for technical staff.
- Generating availability & workload detail reports.

Operations Analyst, Senior – Tier 3

Overtime Status: Non-Exempt

Works independently to provide advanced support to operations staff, customers and vendors. Is the technical lead and provides in-depth analysis of product outages, problems, and faults utilizing standard and specialized enterprise tools. Identifies exposures and makes recommendation for operational improvements. Attends operational related meetings as a representative of operations. In addition to the responsibilities of lower tier is also responsible for the following:

Overall responsibilities are:

- Provide in depth analysis of system and application outages, problems, and faults utilizing specialized tools.
- Ensure outages and recurring problems are reviewed with the technical staff and improvements identified and completed
- Automating tasks and generating recovery procedures.
- Chair product problem and change meeting with the technical staff to track open problems and discuss upcoming system, application, and network changes.

- Review and modify severity, text and solution of error messages.
- Performs escalation notifications to appropriate personnel for support on problems that can't be solved by a standard operational procedure.
- Provides advanced training and guidance for technical staff.
- Creates procedures and reports for technical staff and management.

CUSTOMER SERVICE CATEGORY

This category includes job descriptions, which provide guidance, coordination and assistance pertaining to systems applications and hardware.

Customer Service Architect	Tier 4
Customer Service Consultant	Tier 3
Customer Service Specialist	Tier 2
Customer Service Analyst	Tier 1
Service Desk Analyst, Sr.	Tier 2
Service Desk Analyst	Tier 1

Individuals in this group may advance to other positions in the IT matrix. These may include the Distributed Support and Q/A Categories.

Customer Service Analyst – Tier 1

Overtime Status: Non-Exempt

Under supervision, provide guidance, assistance, coordination and follow up on customer issues pertaining to all systems applications, hardware and software supported by customer service.

Overall responsibilities are:

- Interprets, evaluates and resolves if possible, inquires pertaining to the functional operation of all installed application hardware and software products supported by customer service.
- Manages issues through resolution and/or escalate when appropriate.
- Consult with the supervisor or other support professionals when the appropriate course is unclear.
- Determine and notify the proper technical area for assigning unresolved cases.
- Alert management and team members when a major problem is suspected.
- Follow up with the customer to ensure customer satisfaction.
- Make suggestions for improvement in procedures and policies
- Record and logs all details related to support calls in a call tracking system.
- Document changes to current customer service processes based on recurring events and/or developed enhancements.

Customer Service Specialist – Tier 2

Overtime Status: Non-Exempt

Under minimal supervision, provide guidance, assistance, coordination and follow up on customer issues, and resolve complex problems related to systems applications, hardware and software supported by customer service.

- Interprets, evaluates and resolves if possible, inquires pertaining to the functional operation of all installed application hardware and software products supported by customer service.
- Manages issues through resolution and/or escalate when appropriate.
- Consult with the supervisor or other support professionals when the appropriate course is unclear.
- Determine and notify the proper technical area for assigning unresolved cases.
- Alert management and team members when a major problem is suspected.

- Follow up with the customer to ensure customer satisfaction.
- Record and logs all details related to support calls in a call tracking system.
- Responds to complex issues escalated by the Customer Service Analyst.
- Provides technical guidance and consults with other support units to identify and resolve complex customer issues.
- Confirm availability of systems after outages have occurred and update the customer community.
- Participate in the analysis of issues that may require changes to departmental procedures, standards or systems.
- Participate in the evaluation of new utilities and tools.
- Provides training and guidance for customer service staff.
- Represent customer service on projects related to any business units new or updated systems applications, hardware or software.
- Document changes to current customer service processes based on recurring events and/or developed enhancements.

Customer Service Consultant – Tier 3

Overtime Status: Non-Exempt

Works independently, provides training and guidance to customer service staff. Assists with scheduling, training, technical interviewing and documentation. Overall responsibilities are:

- Develop and implement training for customer service staff.
- Develop customer service policies and procedures.
- Investigates and consults with other support units to identify and resolve complex customer issues
- Represent customer service on projects related to any business units new or updated systems applications, hardware or software.
- Evaluates and recommends new utilities and tools.
- Review case solutions by documenting common solutions to increase first call resolution.
- Responds to complex issues escalated by customer service staff.
- Document changes to current customer service processes based on recurring events and/or developed enhancements.

Customer Service Architect - Tier 4

Overtime Status: Exempt

Leads the integration of new technologies in customer service. This includes translating complex business requirements and aligning the appropriate technology architecture solution to support business needs. Has the ability to deliver technology architectures at the enterprise level (multiple systems). Responsibilities include:

- Representing information technology in direction setting for corporate enterprise.
- Providing leadership and direction in the definition and maintenance of customer service technology standards. Establishes the technology direction for customer service and the migration to the standard customer service architecture. This includes desktop and server hardware, operating systems, middleware, messaging and network architectures.
- Communicating customer service standards to information technology units, business partners and customer technology teams.
- Validating customer services technology solutions and strategies with the business architecture/direction.
- Establishing and implementing end-to-end technology architectures for new technologies that will be used in the customer services systems portfolio (e.g., telephony, electronic communications, workflow/scheduling, document management, etc.).
- Establishing and implementing high availability platforms and business resumption planning architectures.
- Providing technology awareness and education to customer service staff.

Service Desk Analyst

IT Tier 1

Under general supervision, responsible for receiving inquiries from customers and internal users and, using various diagnostic tools, guiding customers through situations, providing the highest levels of resolution, support and customer satisfaction, in-line with company policy and procedures. Responsible for recording and where possible,

fulfilling service requests, escalating or progressing requests to other Technology teams when appropriate, ensuring that calls are logged accurately, categorized correctly, and that resolution information is properly recorded.

SERVICE DESK ANALYST, SR.

IT Tier 2

Under minimal supervision, performs all the duties of a Service Desk Analyst, and in addition provides second-level and advanced support for all Service Desk issues, including mobile device and remote access issues. Responsible for recording and resolving user queries and addressing high-impact incidents and issues. Responsible for answering telephone calls in a polite and timely manner while achieving target call wait time levels, ensuring that all calls are logged accurately and categorized correctly with all relevant information recorded, and ensuring that emails are logged correctly and in a timely manner and that all information is accurately collated to enable the Service Desk or other teams to easily assess the requirements and respond to customers and the business within the agreed service level targets. Responsible for escalating high priority calls to the Service Desk Manager and Enterprise Operations Center as per the SOPs. Will manage and hand off incidents and service requests to offshore locations and coordinate with these teams as necessary. Will coordinate with other Service Desk personnel and other departments as needed to resolve issues. Will provide support, advice, and guidance to Service Desk Analysts.

APPLICATION CATEGORY

This category includes job descriptions, which are involved in developing, implementing and maintaining application systems, which support corporate business needs. An individual can expect to work in diverse areas such as interactive web design, pagination, user applications, mainframe support, etc.

Application Architect	Tier 4
Application Development Consultant	Tier 3
Application Developer	Tier 2
Application Analyst	Tier 2
Application Programmer	Tier 1

Individuals in this group may advance to other positions in the IT matrix. These may include the Information and Q/A Categories.

Application Programmer – Tier 1

Overtime Status: Non-Exempt

Under supervision, develops, implements and maintains application systems to support business needs. Identifies and defines solutions to business requirements and develops implementations. The Application Programmer, working from detailed specifications, generally develops solutions for well-defined, business problems at a subsystem or module scope. Tasks performed include coding, testing, debugging, documenting and maintaining software. Can expect to work in diverse areas such as interactive web design, pagination, user applications, etc.

- Assists in necessary software investigation, analysis and evaluation to determine solution feasibility.
- Assists the project team in developing project cost and benefit estimates.
- Assists in the development of work plans, task sequencing and the extent to which tasks may be performed concurrently.
- Prepares structured charts, tables, and logic diagrams needed in problem analysis.
- Develops module specifications and supports data design.
- Participates in business analysis, systems analysis/consulting, and systems design.
- Makes use of application development standards for designing, building and maintaining applications, applications components, and common services including the use of standard languages and tools.
- Builds and executes rigorous and thorough testing plans for software developed.
- Applies software engineering methods/practices.

Application Analyst – Tier 2

Overtime Status: Exempt

Under minimal supervision, designs, develops, implements and maintains application systems to support business needs. Identifies and defines solutions to business requirements and develops implementations. The Application Analyst generally develops solutions for well-defined, simple to moderately complex business problems at a subsystem scope. Tasks performed include project sizing and costing, coding, testing, debugging, documenting and maintaining software code. Provides guidance, training and support for technical staff, business partners, vendor and end users. Can expect to work in diverse areas such as interactive web design, pagination, user applications, etc.

- Performs software investigation, analysis and evaluation to determine solution feasibility.
- Assists the project team in developing project cost and benefit estimates.
- Advises the project manager on the implications of existing business systems that can be applied to the problem.
- Assists in the development of work plans, task sequencing and determines the extent to which tasks may be performed concurrently.
- Prepares structured charts, tables, and logic diagrams needed in problem analysis.
- Develops programming specifications and supports data design.
- Participates in business analysis, systems analysis/consulting and systems design.
- Makes use of application development standards for designing, building and maintaining applications, applications components, and common services including the use of standard languages and tools.
- Provides guidance and training to technical groups and end users.
- Builds and executes rigorous and thorough testing plans for software development including system and module level performance testing.
- Applies software engineering methods/practices.
- Participates in architecture and design reviews.

Application Developer – Tier 2

Overtime Status: Exempt

Under minimal supervision, will design and implement solutions supporting various business applications. The Application Developer will create, edit and update web pages or for *desktop, tablet or mobile platforms*. Responsibilities will also include collaborating and consulting with the various design, editorial, and technology teams on prototypes, mock-ups and explorations. Developers will be responsible for new product development, customizations, and enhancements and will work closely with cross-functional staff to deliver against project goals.

- Design, code, and support solutions to meet business needs.
- Coding and maintenance of business specific applications.
- Work with Application Architects and Tech Leads to design integrations between distributed systems.
- Code, configure, unit test and create supporting documentation for application development tasks.
- Support application testing and deployment as part of the full release cycle
- Provide support for the production environment including incident management and resolution
- Identify and plan for system upgrades including vendor hardware and software upgrades
- Understanding of object-oriented programming and service oriented architecture and good communication abilities.
- Background in Agile Deployment practices

Application Development Consultant – Tier 3

Overtime Status: Exempt

Works independently, delivers state-of-the-art application design, development and support that are full system in scope. Keeps abreast of new and emerging business systems design and development techniques and makes appropriate recommendations for their use. Aware of business impacts to the solutions delivered. Provides advice, guidance, training and

support to business and information technology users, business partners, vendors and management. Can expect to work in diverse areas such as interactive web design, pagination, user applications, etc.

- Develops and implements solutions for business problems.
- Performs necessary investigation, analysis, and evaluation to determine project feasibility.
- Develops project cost and benefit estimates. This includes the development of alternative recommendations for new business systems or changes to existing business systems.
- Advises on the implications of existing business systems that can be applied to the problem.
- Estimate resource needs. Develops work plans, task sequencing and determines the extent to which tasks may be performed concurrently.
- Prepares structured charts, tables, and logic diagrams needed in problem analysis.
- Develops programming specifications and supports data design.
- Performs business analysis, systems analysis/consulting, and detailed systems design.
- Implements application development standards for designing, building and maintaining applications, applications components, and common services including the use of standard languages and tools.
- Defines, builds and executes rigorous and thorough testing plans for assembly, component, life cycle and stress testing phases of implementation.
- Implements software engineering methods/practices.
- Participates in architecture and design reviews.
- Reviews and communicates system enhancement needs, leading the solution implementation.

Application Architect - Tier 4

Overtime Status: Exempt

Leads a team of application consultants, programmers and analysts in setting application architecture direction and implementing the development environment with workbenches. This also includes delivering application engineering mentoring services to business systems development and maintenance staffs. Comprehends complex application architecture models and aligns the appropriate architecture solutions to support business needs. Has the ability to deliver application architectures at the enterprise level (multiple systems). Is responsible for the following:

- Defining and implementing application architecture models and programming standards with direction setting support.
- Defining and building the application development and maintenance environment (includes component and assembly test environments). This includes the design and implementation of the developers', testing, application monitoring/control, change management and implementation workbenches.
- Leading the analysis and evolution of the corporate application portfolio to meet business systems processing needs. This includes supporting the direction in the use/migration of legacy applications to the distributed systems application architecture.
- Providing direction setting and application consulting to all systems units in support of the application architecture. This includes the appropriate use of standard models on development efforts and application purchases, as well as the development of common application services.
- Designing and implementing the process and repository for cataloging and managing application code/constructs (software configuration management) and reusable application components.
- Defining, application development standards for designing, building and maintaining applications, application components, and common services including the recommended use of languages and tools.
- Implementing software engineering methods/practices.
- Implementing the architecture review and design council processes.
- Communicating system enhancement needs, leading the solutions implementation.
- Defines Human Factors standards consistent with the application architecture.

INFORMATION CATEGORY

This category includes job descriptions, which design, develop, maintains and administers database systems. This category contains two sub-categories; Database Administration and Data Warehousing. The highest level in this group spans both categories.

Information Architect	Tier 4
Database Administration Consultant	Tier 3
Database Administrator	Tier 2
Data Warehouse Consultant	Tier 3
Data Warehouse Designer	Tier 2
Data Warehouse Analyst	Tier 1

Individuals in this group may advance to other positions in the IT matrix. These may include the Technical and Q/A Categories.

Data Warehouse Analyst - Tier 1

Overtime Status: Non-Exempt

Under supervision, responsible for the delivery of data solutions to business systems development teams that cover data design and integrity processes, data ownership definition, data value/classification, and creation/enhancement of logical data schema. Implements technology standards with regard to data management tools/techniques and the implementation of data repositories, data load, mining and reporting tools. Provides support services for well-defined simple data models - generally supporting one business system of similar complexity. Can expect to work in diverse areas such as interactive web design, pagination, user applications, etc.

- Uses standard processes to increase reliability, integrity and availability of cross platform data access.
- Performs data administration support for conceptual/logical data modeling, logical access path modeling, data recovery planning and implementation, data integrity and troubleshooting.
- Participates with technical staff, business partners and customers in establishing system availability requirements and estimating business system transaction and data volumes.
- Participates with other technical staff in designing and developing business systems solutions.
- Partners with quality assurance in designing, planning and testing.

Data Warehouse Designer - Tier 2

Overtime Status: Exempt

Under minimal supervision, delivers data solutions to business systems development teams that cover data design and integrity processes, data ownership definition, data value/classification, and creation/enhancement of logical data schema. Implements technology group standards with regard to data management tools/techniques and the implementation of data repositories data load, mining and reporting tools. Provides support services for well-defined models of simple to moderate complexity - generally supporting one business system of similar complexity. Can expect to work in diverse areas such as interactive web design, pagination, user applications, etc.

- Implements technology group information architecture and standards.
- Provides training and guidance for technology staff.
- Implements standard processes to increase reliability, integrity and availability of cross platform data access.
- Performs data administration support for conceptual/logical data modeling, logical access path modeling, data recovery planning and implementation, data integrity and troubleshooting.
- Works with business partners and customers in establishing system availability requirements and estimating business system transaction and data volumes.
- Implements data migrations and conversions.
- Works with technical staff in designing and developing business systems solutions.

- Partners with quality assurance in designing, planning and testing.
- Participates in database design reviews.

Data Warehouse Consultant - Tier 3

Overtime Status: Exempt

Works independently, to deliver data solutions to business systems development teams that cover data design and integrity processes, data ownership definition, data value/classification, and ownership of the logical data schema. Provides input to the technology group information architecture direction -- principles, standards, guidelines, templates, and blueprints for all data formats (text, image, video, voice, etc.). Develops and implements technology group standards with regard to data management tools/techniques and the implementation of data repositories data load, mining and reporting tools. Provides data administrative services at the departmental to enterprise level. Can expect to work in diverse areas such as interactive web design, pagination, user applications, etc. Overall responsibilities are as follows:

- Participates in developing company-wide directions and standards.
- Develops processes to increase the reliability, integrity and availability of cross platform data access.
- Performs data administration support for conceptual/logical data modeling, data definition/schema management, logical access path modeling, security, cleanup, recovery planning and implementation, data integrity and troubleshooting.
- Works with business partners and customers in establishing system availability requirements and estimating business system transaction and data volumes.
- Designs, develops and implements data migration and conversion strategies.
- Works with technical staff in designing and developing business systems solutions.
- Partners with quality assurance in designing, planning and testing.
- Supports testing, development, and production database environments.
- Provides training and guidance to technical staff.
- Performs data base design.

Database Administrator - Tier 2

Overtime Status: Non-Exempt*

Under minimal supervision, delivers data solutions to business systems development teams that cover data design and integrity processes, data ownership definition, data value/classification, and creation/enhancement of logical data schemas and physical implementation. Implements technology group standards with regard to data management tools/techniques and implementation of data repositories, data load and reporting tools. Provides support services for well-defined models of simple to moderate complexity – generally supporting one business system of similar complexity. Overall responsibilities are as follows:

- Implements technology group information architecture and standards.
- Provides training and guidance in the use of DBA tools, techniques, solutions and standards.
- Implements defined processes to increase the reliability, integrity and availability of cross platform data access.
- Provides database administration support for physical data modeling, conceptual/logical data modeling, logical access path modeling, design and generation of databases, performance tuning, data recovery planning and implementation, data integrity, and troubleshooting and repair services.
- Participates with technical staff, business partners, and customers in establishing system availability requirements and estimating business system transaction and data volumes.
- Participates in software, data migration and conversion strategies including legacy systems.
- Executes software migration and installations.
- Partners with technical staff in designing and developing business systems solutions that include efficient access paths and database processing.
- Partners with the quality assurance team in designing, planning, and executing capacity and stress tests for new systems assets.
- Participates in the evaluations, selection, installation, customization and daily support of database software including support products.
- Participates in hardware selection, configuration and customization.

- Creates specialized database software to support business requirements.
- Supports testing, development, and production database environments.

Database Administration Consultant - Tier 3

Overtime Status: Exempt

Works independently to deliver state-of-the-art data solutions to business systems development teams that cover data design and integrity processes, data ownership definition, data value/classification, and ownership of the logical data schema and physical implementation. Provides input to the technology group information architecture direction – principles, standards, guidelines, templates, and blueprints for all data formats (text, image, video, voice, etc.). Develops and ensures the implementation of technology group standards with regard to database management tools/techniques and the implementation of data repositories, data load, and reporting tools. Keeps abreast of new and emerging database design and implementation techniques and makes appropriate recommendations for their use. Provides advice, direction and support to business and technology partners and consultants. Provides support for well-defined models of moderate to high complexity – generally supporting one business system of similar complexity. Overall responsibilities are as follows:

- Implements technology group information architecture and database directions and standards.
- Provides training and guidance to technical staff in the use of DBA tools, techniques, solutions and standards.
- Implements defined processes to increase the reliability, integrity and availability of cross platform data access.
- Provides in depth database administration support for physical data modeling, conceptual/logical data modeling, data definition/schema management, logical access path modeling, security, design and generation of databases, performance tuning, data recovery planning and implementation, data integrity and troubleshooting and repair services.
- Participates with technical staff, business partners, and customers in establishing system availability requirements and estimating business system transaction and data volumes.
- Designs, develops and implements data migration and conversion strategies.
- Works with technical staff in designing and developing business systems solutions that include efficient access paths and database processing.
- Participates in DB design reviews.
- Partners with the quality assurance team in designing, planning and executing capacity and stress tests for new technology system assets.
- Participates in the evaluations, selection, installation, customization and daily support of database software including support products.
- Participates in hardware selection, configuration and customization.
- Creates specialized database software to support business requirements.
- Supports testing, development and production database environments.

Information Architect - Tier 4

Overtime Status: Exempt

Provides technical leadership to establish the information architecture by defining the information architecture principles, standards, guidelines, templates, and blueprints – for all data formats (text, image, video, voice, etc.). Responsible for the integrity of the enterprise data model (logical and physical), standard data design methodology, and alignment with security/audit standards. Sets and/or implements technology group standards with regard to database tools/techniques, data repositories, data warehousing/marts, and data load, mining and reporting tools. Works with business partners in validating conceptual and logical data models and enabling information assets for new products and services, as well as setting direction in maintaining existing production, development, training and reporting environments. Overall responsibilities are as follows:

- Represents the technology group, along with management, in setting corporate-wide directions and standards.
- Designs the strategy and implementation of the information architecture to align with the business direction.
- Develops processes to increase the reliability, integrity and availability of cross platform data access. Works with management in establishing the standard business systems development methodology.
- Ensures the processing integrity of the information architecture through referential integrity and business process rules.

- Delivers logical and physical data designs for business systems. Works with business partners and customers in establishing system availability requirements and estimating business system transaction and data volumes. Estimates platform scalability.
- Designs, develops and implements software, data migration and conversion strategies. Initiates and enables legacy system conversions.
- Partners with technical staff in designing and developing business systems solutions.
- Partners with the Quality Assurance in designing and planning capacity planning and stress testing analysis for new systems assets.
- Supports/directs Database Administration and Data Warehouse staff in maintaining the data integrity and validity of testing, development, and production environments.
- Delivers database administration support for physical data modeling, access path modeling, design and generation of databases, database performance tuning, database recovery planning and implementation, database troubleshooting and repair services.
- Delivers data administration support for logical data modeling, data definition/ schema management, data security and data cleanup/support services.

TECHNICAL CATEGORY

This category includes job descriptions, which design, develop, maintains, analyze, troubleshoots and administers computer systems. This category contains five sub-categories; Technical Design, Systems Administration, Systems Programming, Technical and Systems Support . The Technical Design and Systems Programming sub-categories do not contain an entry level position and the Technical Support sub-category does not contain a Tier 3 position The highest level in this group spans all five categories.

Technical Architect	Tier 4
Senior Systems Programmer	Tier 3
Systems Programmer	Tier 2
Systems Administration Consultant	Tier 3
Systems Administrator	Tier 2
Systems Technician	Tier 1
Systems Support Specialist, Senior	Tier 3
Systems Support Specialist	Tier 2
Systems Support Analyst	Tier 1
DevOps Engineer	Tier 2
DevOps Engineer, Senior	Tier 3
Technical Support Engineer	Tier 2
Technical Support Analyst	Tier 1
Technical Design Consultant	Tier 3
Technical Consultant	Tier 3
Technical Designer	Tier 2

Individuals in this group may advance to other positions in the IT matrix. These may include the Network, Security and Q/A Categories.

Systems Programmer – Tier 2 **Overtime Status:** Exempt

Under minimal supervision, installs and modifies all operating system and supporting software products. Performs problem resolution, analyzes and evaluates new hardware/software products, monitors and assists technical staff with performance tuning and capacity planning. Creates specialized software to support business requirements. Participates in system disaster recovery exercises and application development projects. Generally supports mainframe systems. Documents changes and follows established ‘Change Management’ procedures. Overall responsibilities are:

- Participates in the evaluations, selection, installation, customization, and daily support of system software including support products.

- Participates in hardware selection, configuration and customization.
- Investigation and analysis of software/hardware problems.
- Monitors performance and assists technical staff with performance tuning and capacity planning.
- Creates specialized software to support business requirements.

Senior Systems Programmer – Tier 3

Overtime Status: Exempt

Works independently on a broad range of assignments that include; providing technical expertise and leadership for problem solving, hardware/software evaluation, and training/direction for systems programmers. Evaluates and recommends the purchase of hardware/software products and acts as a vendor liaison. Encompasses all of the working skills and knowledge of a systems programmer. Provides project leadership for mainframe system related projects, and can represent technical area for various other project teams. Overall responsibilities are:

- Provides direction and training for systems programmer.
- Investigation and analysis of software/hardware problems.
- Leads the evaluations, selection, installation, customization, and daily support of system software including support products.
- Evaluate and recommends the purchase of hardware/software products.
- Acts a vendor liaison.(provides vendor management)

Systems Support Analyst – Tier 1

Overtime Status: Non-Exempt

Under supervision provides support, maintenance and operation of electronic and electromechanical systems used to produce publications or products at various corporate locations.

- Supports the integration of new technologies into operations.
- Supports desktop and server hardware, operating systems, middleware, messaging, and network architectures.
- Supports data communications systems and equipment.
- Performs system software, application, and hardware upgrades.
- Installs, upgrades, and maintains desktop systems.
- Monitors and analyzes the operation of systems and equipment to ensure proper functioning of lines, hardware and software.
- Notifies management and customers of system and network troubles.
- Identifies and resolves problems utilizing structured troubleshooting methods, techniques and tools for systems, applications, data communications and electromechanical equipment.
- May provide basic help desk support for customers areas, including providing information on trouble resolution.
- Prepares and maintains standard operating procedures, documents, drawings and system documentation including operating manuals.

Systems Support Specialist – Tier 2

Overtime Status: Non-Exempt

Under minimal supervision provides support, maintenance and operation of electronic and electromechanical systems used to produce publications or products at various corporate locations.

- Supports the integration of new technologies into the operation.
- Provides technical assistance, guidance, and training to staff and customers.
- Maintains corporate technology and publication quality standards.
- Implements the corporate technology direction. This includes desktop and server hardware, telephony, operating systems, middleware, messaging, network architectures, and electromechanical equipment.
- Implements high availability platforms and business resumption planning architectures.
- Acts as a liaison for vendors during installation, rearrangement and/or removal of equipment.

- Performs system software, application, and hardware upgrades.
- Develop and maintain documentation needed by support staff, including troubleshooting steps, installation instructions, new tools overviews, and contact lists.
- Implements and maintains training programs.
- Performs investigation and analysis to solve problems.
- Provides hardware and systems software support, including ancillary software products.
- Directs trouble resolution activities, coordinating with technical staff, vendors, and carriers.
- Notifies management and customers of network/systems troubles through a tiered notification and escalation process.
- Organizes, conducts and documents post-mortems for network and system problems.
- Performs limited system administrator functions.
- Responsible for the effectiveness, quality, and timeliness of trouble resolution, quality of service and implementation success, also services Tier 1 agreements.

Systems Support Specialist, Senior – Tier 3

Overtime Status: Non-Exempt

Works independently, providing support, maintenance and operation of electronic and electromechanical systems used to produce publications or products at various corporate locations.

- Supports the integration of new technologies into the operations.
- Acts as a liaison for vendors during installation rearrangement and/or removal of equipment.
- Provides technical assistance, guidance, and training to staff and customers.
- Maintains corporate technology and publication quality standards.
- Implements the corporate technology direction. This includes desktop and server hardware, telephony, operating systems, middleware, messaging, and network architectures, electromechanical equipment.
- Responds to complex issues escalated by other support personnel.
- Provides project leadership, including analysis and evaluation of resource and delivery requirements with project estimates.
- Develops and maintains documentation needed by support staff, including troubleshooting steps, installation instructions, new tools overviews, and contact lists.
- Develops and maintains training programs.
- Creates and modifies programs and scripts needed for support infrastructure.
- Plans and performs system software, application, and hardware upgrades.
- Provides hardware, software, application, and network support for servers.
- Acts as the technical lead for projects.
- Performs limited database administrator functions.
- Performs systems administrator functions.
- Establishes / recommends policies on system use and services.
- Accountable for the effectiveness, quality, and timeliness of trouble resolution, quality of service and implementation success, also services Tier 1 agreements.
- Works pro-actively to ensure high performance, high reliability, and rapid trouble resolution of the network(s) including hardware and software.
- Directs trouble resolution activities, coordinating with technical staff, vendors, and carriers.
- Notifies management and clients of network/system troubles through a tiered notification and escalation process.
- Organizes, conducts and documents post-mortems for severe system and network outages.
- Develops test and maintenance procedures and policies
- Acts as a technical consultant during all phases of the planning, design, and implementation or operations process.

DevOps Engineer – Tier 2

Overtime Status: [Non-Exempt]

Under minimal supervision, works independently and as a member of a multi-disciplined technical team for rapid deployment of new technologies. Dev Ops engineers generally work on more cross functional systems and design digital infrastructure, which includes cloud, physical and virtual instances, security groups, load balancing, external services, cost optimizations, auto scaling templates, automation, etc. Responsible for integrating all the pieces that allow other engineers to quickly deploy, run, and manage applications. Includes translating complex business requirements and aligning the appropriate technology architecture solution to support business needs. Supports and tests newly developed or acquired architectures and/or systems on servers to varying network technologies. Also works with other groups in support of corporate projects. Assists in training groups and individuals on how to use technologies for IT automation, configuration management, and continuous delivery, and evaluates such training to ensure that training is effective, using feedback and testing to continually improve the systems used. Responsible for remaining knowledgeable and up-to-date on changes and developments in enterprise computing infrastructure and cloud computing.

DevOps Engineer, Senior – Tier 3

Overtime Status: [Exempt]

In addition to performing all the duties of a Dev Ops Engineer, the Senior Dev Ops Engineer works independently, and with little or no supervision leads a multi-disciplined technical team deploying new technologies. This includes translating complex business requirements and aligning the appropriate technology architecture solution to support business needs. Has the ability to deliver technology architectures at the enterprise level (multiple systems). Must be able to liaison directly with various internal and external groups to drive solutions without relying on management. Leads effort to create production-ready configurations in the delivery of flagship architectures/technologies via business focused projects. Responsible for analyzing customer feedback and developing solutions. Responsible for designing and delivering presentations to Dow Jones personnel regarding IT technologies and processes. Trains groups and individuals on how to use technologies for IT automation, configuration management, and continuous delivery, and evaluates such training to ensure that training is effective, using feedback and testing to continually improve the systems used.

Technical Support Analyst – Tier 1

Overtime Status: Non-Exempt

Under supervision, analyzes, troubleshoots, repairs, and resolves any technical problems on supported equipment to the component level.

- Initiate request(s) for the necessary supplies/parts required for day-to-day operation.
- Provide telephone support.
- Assist in the installation and training of systems when necessary.
- Assist in the development, modification, and (or) upgrade of any new or existing systems/equipment.

Technical Support Engineer – Tier 2

Overtime Status: Non-Exempt

Under minimal supervision, analyzes, troubleshoots, repairs and resolves any technical problems on supported equipment to the component level. Maintains records and histories of all repaired components and communicates with management and other corporate departments, as well as outside vendors, on problems encountered, and suggests possible improvements.

- Supplies telephone support to corporate technical staff when necessary.
- Provide training and guidance for technical staff.

- Provide user training of supported equipment.
- Install and modify supported systems.
- Develop tests and maintenance policies
- Works with vendors to resolve replacement or modification issues.

Systems Technician - Tier 1

Overtime Status: Non-Exempt

Under supervision, provides hardware, software, application, and limited network support for production and non-production servers.

- Assists in problem investigation, analysis, and evaluation to determine solution.
- Performs routine systems maintenance, such as backups and disk maintenance.
- Maintains hardware and software configuration documentation.
- Follows procedures for change management and coordination.
- Works with technical staff and vendors in diagnosing and correcting hardware problems.

Systems Administrator – Tier 2

Overtime Status: Non-Exempt

Under minimal supervision, provides hardware, software, application, and limited network support for production and non-production servers.

- Investigate and analyze problem to determine solutions.
- Installs, upgrades and maintains hardware, operating and application systems.
- Configures and troubleshoots the systems network connectivity.
- Assists in server configuration.
- Monitors performance on servers and takes corrective measures.
- Installs, configures, and maintains server based firewalls and rule-sets.
- Configures mail systems.
- Performs account management.

Systems Administration Consultant – Tier 3

Overtime Status: Exempt

Works independently, provides hardware, software, application, and limited network support for production and non-production servers.

- Acts as the technical lead for a project.
- Performs investigation and analysis to solve problems.
- Assists in server configuration.
- Acts as a vendor liaison. (vendor management)
- Installs, configures, and maintains server based firewalls and rulesets.
- Perform limited database administrator functions.
- Helps design server topology.
- Establishes / recommends policies on system use and services.
- Perform analysis to tune systems.
- Provides training and guidance to technical staff.

Technical Designer – Tier 2
Overtime Status: Non-Exempt

Under minimal supervision, acts as a member of a multi-disciplined technical team for rapid deployment of new technologies. This includes translating simple to moderately complex business requirements and aligning the appropriate technology architecture solution to support business needs. Supports and tests newly developed or acquired architectures and/or systems at the multi-unit level from desktops and servers to varying network technologies. Also works with other technology groups in support of corporate projects. Responsibilities include:

- Maintains technology standards. Implements the technology direction for, and the migration to, the standard corporate technical architecture. This includes desktop and server hardware, operating systems(s), middleware, messaging, and network architectures.
- Communicates standards to corporate units, business partners and customer technology teams.
- Validates technology solutions and strategies with business requirements.
- Supports the implementation of end-to-end architectures for new technologies that will be used in corporate systems.
- Supports various corporate groups.
- Implements high availability platforms and business resumption planning architectures.
- Supports the delivery of technology awareness presentations and education to corporate business systems development teams.
- Participates in technical architecture reviews for business systems projects.

Technical Design Consultant – Tier 3
Overtime Status: Exempt

Works independently as a member of a multi-disciplined technical team for rapid deployment of new technologies. This includes translating complex business requirements and aligning the appropriate technology architecture solution to support business needs. Supports and tests newly developed or acquired architectures and/or systems on the departmental level including desktops and servers to varying network technologies. Also works with other groups in support of corporate projects. Responsibilities include:

- Supports the definition and maintenance of technology standards. Implements the technology direction for, and the migration to, the standard corporate technical architecture. This includes desktop and server hardware, operating systems(s), middleware, messaging, and network architectures.
- Communicates standards to corporate units, business partners and customer technology teams.
- Validates technology solutions and strategies with business requirements.
- Implements end-to-end technology architectures for new technologies that will be used in corporate systems.
- Implements and supports various technology groups.
- Implements high availability platforms and business resumption planning architectures.
- Provides technology awareness and education to ITS business systems development teams.
- Supports and leads technical architecture reviews for business system projects.

Technical Consultant – Tier 3
Overtime Status: Exempt

Under minimal supervision, responsible for defining the architecture and engineering solutions in support of all Business Unit network infrastructure services. Must drive the technical direction and leadership for multi-disciplined technical teams deploying and supporting network services, including but not limited to routers, switches, load balancers, firewalls, VoIP, proxy servers, remote access devices, DNS servers, FTP servers, NTP servers, SIP services, traditional PBX services, and authentication systems.

Responsibilities include translating complex business requirements and aligning the appropriate Infrastructure solution to support business needs. This role has responsibility for delivering Network Services Infrastructure solutions at the enterprise level (multiple products and systems). Accountability includes planning, design, implementation, and testing activities, to create production-ready configurations in the delivery of all Network Services Infrastructure via business focused

projects. This position is also accountable for the effectiveness, quality of service, performance tuning, and implementation success of the Network Services Infrastructure.

Technical Architect – Tier 4

Overtime Status: Exempt

Leads the multi-disciplined technical team for deployment of new technologies. This includes translating complex business requirements and aligning the appropriate technology architecture solution to support business needs. Has the ability to deliver technology architectures at the enterprise level (multiple systems). Works with other groups supporting corporate projects. Leads effort to create production-ready configurations in the delivery of flagship architectures/technologies via business focused projects.

Responsibilities include:

- Represents information technology in direction-setting for the corporate enterprise.
- Providing leadership and direction in the definition and maintenance of information technology standards.
- Establishes the technology direction and the migration to a standard technical architecture. This includes desktop and server hardware, operating systems(s), middleware, messaging, and network architectures.
- Communicating corporate standards to technology units, business partners and customer teams.
- Validating information technology solutions and strategies with the business architecture/direction.
- Establishing and implementing end-to-end technology architectures for new technologies.
- Establishing and implementing high availability platforms and business resumption planning architectures.
- Providing technology awareness and education to technology business systems development teams.
- Leading architecture reviews for corporate business systems projects.
- Establishes, implements and supports various information technology environments.

QUALITY ASSURANCE CATEGORY

This category includes job descriptions, which are involved in consultation, support and testing of computer systems and products. There is no Architect level position.

Quality Assurance Consultant	Tier 3
Quality Assurance Designer	Tier 2
Quality Assurance Analyst	Tier 1

Individuals in this group may advance to other positions in the IT matrix. These may include the Customer Service and Security Categories.

Quality Assurance Analyst – Tier 1

Overtime Status: Non-Exempt

Under supervision, supports teams of systems professionals in using quality assurance programs and testing environments. Responsibilities include:

- Supporting the delivery of test approaches, plans and requirements to meet the needs of business processing specifications.
- Support quality assurance programs and services.
- Assists test planning, advice and testing standards support services.
- Provide hands-on support of the testing environment for usability and acceptance testing.
- Performs application readiness testing and support.
- Support stress, functionality and compatibility testing.
- Provides integration testing support services.

- Works with customers in a support role to achieve successful implementations.
- Participates in post-implementation reviews to ensure that the business system solution delivers as expected (timeliness, quality, cost) and helps establish-maintain departmental reporting metrics.

Quality Assurance Designer – Tier 2

Overtime Status: Non-Exempt

Under minimal supervision, supports teams of systems professionals in using quality assurance programs, and testing environments. Independently handles simple testing/implementations that are narrow in scope. Responsibilities include:

- Provides business specification and prototype consulting to develop testing approach and requirements for project teams.
- Implements and supports quality assurance programs and services.
- Provides test planning advice and testing standards support services.
- Supports the testing environment ,usability and acceptance testing.
- Coordinates operational readiness testing-support.
- Support stress, functionality and compatibility testing.
- Participates in integration testing support services.
- Works with customers in a support role to achieve successful implementations.
- Conducts post-implementation reviews to ensure that the business system solution delivers as expected. (timeliness, quality, cost)

Quality Assurance Consultant – Tier 3

Overtime Status: Exempt

Works independently, to provide advice, consultation, and support teams of systems professionals in using quality assurance programs and testing environments. Handles complex testing/implementations that are departmental in scope.

Responsibilities include:

- Deliver business specification and prototype consulting to develop testing approach, timetables and requirements for project teams.
- Implements and supports total quality assurance programs and services.
- Provides test planning advice and testing standards support services.
- Supports the testing environment, usability and acceptance testing.
- Coordinates operational readiness testing-support.
- Support stress, functionality and compatibility testing.
- Participates in integration testing support services.
- Works with customers in a support role to achieve successful implementations.
- Leads staff in developing and tuning QA methodology, procedures and metrics.
- Conducts post-implementation reviews to ensure that the business system solution delivers as expected. (timeliness, quality, cost)
- Provides guidance and training for technical staff.

DESKTOP SYSTEMS CATEGORY

This category includes job descriptions, which are involved in supporting applications, hardware and software for desktop systems.

Lead Solutions Engineer	Tier 4
Executive Support Engineer	Tier 3
Solutions Engineer, Senior	Tier 3
Technical Support Analyst, Senior	Tier 2

Asset Management Analyst

Tier 1

Individuals in this group may advance to other positions in the IT matrix. These may include the Customer Service and Technical Categories.

ASSET MANAGEMENT ANALYST

Tier 1

Under general supervision, performs the day-to-day operational tasks demanded by the Asset Management process flows, this covers end-to-end hardware and software asset management (asset life-cycle) from purchasing through to disposal. Responsible for change records and the review and input of information related to the Asset Management processes and communicating changes to the SACM process to key stakeholders and the business where required.

TECH SUPPORT ANALYST, SR.

Tier 2

With minimal supervision, responsible for providing full service desktop technical support to all areas of the Company. Responsible for recording and resolving customer queries using various diagnostic tools. Will provide coverage for the 'walk-in' service where staff can collect their technology devices, receive training and effective troubleshooting on the use of hardware and software and obtain a professional support experience ("Tech Bar"). Will liaise with the appropriate product vendors, arranging demonstrations to showcase new client technology innovations to the business and members of staff as required. Will provide 'how to' presentations to ensure staff gain the most out of existing technology and are aware of the features of new technology provided. Will arrange workshops and user guides as required for new technologies introduced into the business. Will also work closely with other key technology vendors including Samsung, Apple, and Lenovo to ensure the team are kept up-to-date on the latest product innovations and roadmaps.

SENIOR SOLUTIONS ENGINEER

Tier 3

Under general supervision, provides second- and third-tier support for both Windows and Apple client platforms and is responsible for recording and resolving customer queries using various diagnostic tools and interpersonal skills. Responsible for referring incidents to other technology teams where problems cannot be resolved. Will work closely with both internal teams and external vendors to ensure the desired technical support and solutions are achieved - ensuring that all appropriate SLA's & OLA's are achieved and exceeded wherever possible. Will be the technical escalation point for Service Desk and Tech Support Analysts, ensuring assigned calls are responded to, diagnosed and resolved swiftly and effectively in line with operational level agreements and service level agreements. Will ensure that outstanding calls are regularly updated to reflect the current status and will communicate the progress of investigations and planned solutions to customers, managing their level of expectation and increasing their understanding of company's desktop technology.

EXECUTIVE SUPPORT ENGINEER

Tier 3

Under minimal supervision, performs all functions of Senior Solutions Engineer and provides second-level technical support for Windows and Apple client platforms for all Dow Jones Executives – this includes mobile devices as deployed by Dow Jones. Provide home support to the Executive Team within the SLA's set. The role will work closely with other technical teams to ensure Dow Jones achieves the best technical support and solutions to ensure that all appropriate SLA's & OLA's are achieved and exceeded wherever possible. Responsible for recording and resolving customer queries using various diagnostic tools. Will liaise with the appropriate product vendors, arranging demonstrations to showcase new client technology innovations to the Executive team as required. Will provide 'how to' presentations to ensure staff gain the most out of existing technology and are aware of the features of new technology provided.

LEAD SOLUTIONS ENGINEER

Tier 4

Working independently, performs all the duties of a Senior Solutions Engineer, and serves as the escalation point for issues that require more advanced attention. Responsible for managing high-impact incidents affecting the technology systems and environments. Must develop a comprehensive knowledge of the company's business plans and organization, including key users of technology and their needs. Must document actions, alterations and procedures to ensure an accurate and accessible record of the current state of the system. Will play a major role in the adoption and promotion of new Technologies. Will liaise with colleagues, utilizing their expertise to solve more complex problems or pass on responsibility to the appropriate team. Continuously look for improvement within Support and ensure technology support meets the customer requirements as defined in the Service Level Agreements. Will work with external vendors to ensure sufficient capacity for current and agreed future business requirements.

TRAINING CATEGORY

This category includes job descriptions, which are involved in training for hardware, software, applications and operating systems.

Technical Training Consultant	Tier 3 (non unit)
Technical Trainer	Tier 2

Individuals in this group may advance to other positions in the IT matrix. These may include the Customer Service and Technical Categories.

Technical Trainer – Tier 2
Overtime Status: Non-Exempt

Implements and presents introductory and basic computer-based training sessions for a variety of software applications and operating systems. Typically reports to a Training Supervisor. Work may include related duties as required.

- Teaches introductory level courses for corporate and client personnel.
- Reviews approved course materials for end user training
- Assist in needs assessment evaluations with internal & external clients.
- Possess knowledge of or skills needed to setup the classroom environment for training purposes.

DOCUMENTATION CATEGORY

This category includes a single job description, which is involved in all aspects of documentation for corporate customers.

Technical Writer	Tier 2
------------------	--------

Individuals in this group may advance to other positions in the IT matrix. These may include the Customer Service and Security Categories.

Technical Writer – Tier 2
Overtime Status: Non-Exempt

Under minimal supervision, prepares and/or maintains systems, operations and end-user technical documentation.

- Conducts a needs-based analysis of computer systems and applications documentation and identifies the audiences for the information.

- Researches computer systems and applications.
- Interviews technical staff to obtain information for new material.
- Designs the information layout to meet the needs of each audience and presentation medium.
- Combines the information from the analysis, research, interviews and other sources to produce usable documentation for customers.
- Edits and proofreads for technical accuracy, syntax and grammar.
- Ensures that the documentation follows corporate policies and standards.
- Works with a variety of software packages to produce final copy, including system diagrams and screen captures, for print and online production.
- Maintains databases for document publication, delivery and maintenance.
- Reviews vendor provided help files and performs modifications base on internal customizations.

NETWORK CATEGORY

This category includes job descriptions, which design, develop, operates, maintains and administers network operations. This category contains two sub-categories; Network Operations and Network Engineer.

Network Engineering Architect	Tier 4
Network Engineer, Senior	Tier 3
Network Engineer	Tier 2
Network Operations Architect	Tier 4
Network Analyst, Senior	Tier 3
Network Analyst	Tier 2
Network Operator	Tier 1

Individuals in this group may advance to other positions in the IT matrix. These may include the Technical and Q/A Categories.

Network Engineer – Tier 2 **Overtime Status:** Exempt

Under minimal supervision performs planning, design and implementation activities for voice and/or data telecommunications projects which may span multiple business functions and/or integrate both voice and data applications.

Responsible for one or more of the following:

- Conducts network studies and traffic analyses.
- Develops network architectures.
- Prepares forecasts of network traffic and capacity.
- Recommends modifications to the network configurations, which reduce cost or improve service.
- Participates with vendors and network operations in the identification and resolution of complex network problems.
- Evaluates client requests for new or modified voice and/or data network services, recommending alternative solutions to clients to reduce costs or improve service.
- Sizes projects and develops performance level requirements for user approval. Follows up with client to ensure that performance levels have been achieved and resolves any outstanding issues.
- Plans and coordinates installation dates with clients, vendors and staff.
- May perform quality acceptance testing and coordinate or provide training to clients during implementation.
- Participates in the evaluation of vendor proposals and in the development and documentation of operational procedures.

Network Engineer Senior – Tier 3

Overtime Status: Exempt

Works independently, performs planning, design and implementation activities for complex voice and/or data telecommunications projects which span multiple business functions and/or integrate both voice and data applications. Accountable for the effectiveness, quality, and timeliness of project designs and their implementation success.

Responsible for one or more of the following:

- Acts as principal designer for major voice/data telecommunications systems and their subsystems through a thorough understanding of available technology, tools and existing designs.
- Develops complex, tiered network designs.
- May participate in network Architecture decisions
- Performs analysis, design, documentation, testing, implementation and on-going support for complex networking technologies.
- Acts as technical leader for large, complex projects; assists in planning, organizing and controlling the activities as well as the development of the network project plan and timetables.
- Provides technical consulting and leadership to identify and implement new networking technologies, which assist the business units in meeting their strategic objectives.
- Acts as a technical consultant to technology staff members during all phases of the planning, design, implementation or operations process.

Network Engineering Architect – Tier 4

Overtime Status: Exempt

Provides technical leadership for planning, design and implementation work programs involving complex voice and/or data telecommunications projects which span multiple business functions and/or integrate both voice and data applications. Accountable for the effectiveness, quality, and timeliness of project team outputs and their implementation success.

Responsible for one or more of the following:

- Reviews technical designs for major voice/data telecommunications system projects through a thorough understanding of available technology, tools and existing design standards.
- Develops standards for complex, tiered network architectures and designs.
- Performs analysis, design, documentation, testing, implementation and on-going support for extremely complex networking technologies.
- Acts as technical leader for large, complex project teams; assists in planning, organizing and controlling the activities as well as the development of the overall project plan and timetables.
- Provides highly technical consulting and leadership to identify and implement new networking technologies.
- Acts as a technical mentor and coach to technology staff members during all phases of the planning, design, implementation or operations process.
- Provides comprehensive consultation to business units, corporate management and staff at the highest technical level.
- Works closely with client management to identify and specify the complex business requirements and processes (diversity, reliability, quality of service, security, capacity, etc.); researches and evaluates alternative solutions and recommends the most efficient and cost effective solution for the network design.
- Assigns and prioritizes technical activities based on required expertise and complexity.
- In conjunction with the introduction of new technologies will define methods and procedures to integrate the technology in to the standard architecture and operational model.

Network Operator – Tier 1

Overtime Status: Non-Exempt

Under supervision, provides network operations support, administration, installation and maintenance of voice/data/satellite networks (LAN/WAN) and associated lines and equipment.

Overall responsibilities are:

- Follows methods and procedures to support administer, install, and maintain the operation of all network equipment to ensure proper functioning of lines, hardware and software through the use of network management tools and systems.
- Identification and resolution of network problems utilizing structured troubleshooting methods, techniques and tools.
- Follows defined escalation and notification processes.
- Notifies Management and clients of network troubles through a tiered notification and escalation process.
- Provides basic help desk support for client areas, including providing information on trouble resolution and network status.
- Participates with vendors, common carriers and technical staff during problem analysis/resolution, and post-mortem analyses as required.
- Performs network administration functions, including the implementation of documented changes.
- Ensures that standard operating procedures for the network, technical specifications and documents, drawings, system documentation including operating manuals are kept current.
- Tracks and documents defined network performance metrics and statistical data, and produces standardized reports.
- Follows network security policies.

Network Analyst – Tier 2

Overtime Status: Non-Exempt

Under minimal supervision, provides network operations support, administration, installation and maintenance of voice/data/satellite networks (LAN/WAN) and associated lines and equipment. In addition to responsibilities of lower tier is also responsible for the following:

Overall responsibilities are:

- Monitors and analyzes the operation of the network to ensure proper functioning of lines, hardware and software, through the use of advanced network management tools and systems.
- Monitors and tunes networks and system performance.
- Provides training and guidance to technical staff.
- Prepares and maintains standard operating procedures for the network, technical specifications and documents, drawings, system documentation including operating manuals.
- Provides tiered network operations support and engages higher tiered and/or vendor support as required.
- Develops test and maintenance procedures and policies to be performed by network operations.
 - Documentation and submission of changes for network equipment.

Network Analyst, Senior – Tier 3

Overtime Status: Exempt*

Works independently to provide network operations support, administration, installation and maintenance of voice/data/satellite networks (LANs/WANs) and associated lines and equipment. Accountable for the effectiveness, quality, and timeliness of trouble resolution, service Tier 1 agreements, quality of service and implementation success. In addition to the responsibilities of lower tier is also responsible for the following:

Overall responsibilities are:

- Pro-actively analyzes network performance data and recommends changes to ensure high performance, high reliability, of the network.
- Directs trouble resolution activities, coordinating with technical staff, vendors, and carriers.
- Organizes, conducts and documents post-mortems for severe network-affecting events.
- Participates with network operations staff, vendors and other technical staff member on chronic analysis.
- Participates in approval of submitted network changes.
- Approves test and maintenance procedures and policies to be performed by network operations.

- Develops network contingency plans and tests for continuity of business, working with other technical staff.
- Makes recommendations on changes to network elements, processes, or tools to improve quality and timeliness of trouble resolution.
- Provides advanced training and guidance to technical staff.
- Documents and maintains network operations approved hardware and software listings.
- Develops and utilizes troubleshooting procedures for network problems utilizing structured methods, techniques and tools.
- Develops processes and procedures for trouble resolution, coordinating with network operations and engineering staff, vendors, and carriers.
- Assists in the evaluation of proposals and identifying the benefits of changes in hardware, communications protocols, tools, switching methods, access methods, tariffs, and in the procurement of software and equipment Operations.

Network Operations Architect – Tier 4

Overtime Status: Exempt

Provides technical leadership ensuring proper network operations support, administration, installation and maintenance of voice/data/satellite networks (LANs/WANs) and associated lines and equipment. Accountable for the effectiveness, quality, and timeliness of trouble resolution processes, service level agreements, quality of service and implementation success. In addition to the responsibilities of lower tier is also responsible for the following:

Overall responsibilities are:

- Analyzes network performance data and approves recommendations for changes to ensure high performance, and high reliability, of the network.
- Approves processes and procedures for trouble resolution, coordinating with network operations and engineering staff, vendors, and carriers.
- Provides the highest in-house level of tiered network operations support and engages vendor support as required.
- Communicates with senior management and clients on status of network troubles and expected resolution through a tiered notification and escalation process.
- Approves conclusions and recommendations of post-mortems for severe network-affecting events.
- Reviews, evaluates, and utilizes troubleshooting procedures for network problems utilizing structured methods, techniques and tools.
- Represents network operations in the review of all designs and architectures to be implemented in the production network. Ensures that network operations is trained and has the proper tools to support new technology as well as ensure the design is operationally manageable.
- Develops vendor requirements for network reliability and contingency, and reviews disaster recovery and security plans.
- Conduct or organize training sessions.
- Reviews and evaluates changes to network operations hardware and software listings.
- Assists in the evaluation of vendor proposals and in the benefits of changes in hardware, communications protocols, tools, switching methods, access methods, tariffs, and in the procurement of software and equipment.
- Reviews and evaluates recommendations made for changes to network elements, processes, or tools to improve quality and timeliness or trouble resolution.

PROJECT CATEGORY

This category includes job descriptions, which directly involve project management. There are three levels of jobs.

Project Manager	Tier 4 non unit
Project Coordinator	Tier 3
Project Administrator	Tier 2

Individuals in this group generally move into this category from others in the matrix. Due to the high level of skills, this category does not have an entry position.

Project Administrator – Tier 2

Overtime Status: Non-Exempt

Works under supervision of a project manager to develop and manage project plans, schedules, budgets, estimates and reports for projects. The project administrator coordinates production of deliverables and has an in-depth knowledge of project management tools and methodologies.

- Performs project administration tasks.
- Maintains productive working relationships with business partners, customers and corporate systems community.
- Assures the documentation and training is scheduled.
- Prepares timely project status and budget reports.
- Performs the duties of a team member.
- Prepares project charters or scope document with the assistance of the project manager.
- Keeps team members informed.

Project Coordinator – Tier 3

Overtime Status: Exempt

Works independently, delivers project outcomes by monitoring and controlling cost, schedule, resources, scope and risk. Responsible for overseeing moderately complex projects or phases of larger projects with a well-defined scope and contained risks. Accountable for all aspects of the project over the entire project life cycle, managing expectations, and ensuring quality of the project, setting project task priorities, project-team staffing, assignments and budget.

- Maintains existing on-going working relationships with business partners, customers and corporate systems community.
- Works with the business representative to prepare functional requirements.
- Coordinates the project budget, scope of work, project schedule and project team. May prepare timely project status reports.
- Prepares technical requirements.
- Understands project scope and objectives, as well as the roles of all team members, to effectively coordinate the activities of the team.
- Tracks project progress according to the planned deliverables.
- Identifies issues that impact scope, budget or schedule associated with successful project completion.
- Assures all documentation and training are complete, acceptable and in accordance with standards.
- May also perform other functions on the project team as required by area of expertise. (e.g. business, application or technical consultant)
- Maintains current knowledge of application, information and technical architecture standards as well as industry-wide technical innovations.
- Provides input to the delivery of system standards via the analysis of business requirements.
- Prepares project plan and could perform project administration tasks

- Closes out a project, reviews and shares best practices and lessons learned.

BUSINESS CATEGORY

This category includes job descriptions, which specify and design automated solutions to business problems and opportunities. The four levels are:

Business Architect	Tier 4 non unit
Business Consultant	Tier 3
Business Designer	Tier 2
Business Analyst	Tier 1

Individuals in this group may advance to other positions in the IT matrix. These may include the Project and Information Categories.

Business Analyst – Tier 1

Overtime Status: Non-Exempt

Under supervision, provides support for planning, business requirements definition, problem/change analysis, business problem resolution, monitoring and follow-through. Supports overall administrative activities. Responsible for participating in enacting or supporting business solutions at business unit and/or subsystem scope. Responsibilities include the following:

- Reviews requirements and provides initial impact assessment of problems and changes.
- Resolves problems and handles change control activities.
- Maintains effective communications with the technology team, business partners and customers.
- Responds to inquiries and provides status on problem resolution and follows through to ensure completeness and business partner/customer satisfaction.
- Develops initial business specifications for automated solutions to business problems. If feasibility/cost/benefit of the automated solution is in doubt, recommends non-automated solutions to business problems.
- Participates in test planning.
- Analyzes and tests automated solutions to business systems problems with guidance.
- Provides analytical support for cost/benefit and productivity analysis.
- Develops business systems documentation.
- Supports quality assurance/testing efforts with hands-on support.

Business Designer – Tier 2

Overtime Status: Non-Exempt

Under minimal supervision, engineers business design specifications for automated solutions to business opportunities and problems at a multi-unit/departmental scope. Automated solutions involve multiple subsystems or a full system. Keeps abreast of new and emerging business design techniques and makes appropriate recommendations for their use.

Responsibilities include the following:

- Understands the customer's business needs and is integral in delivering the desired end product.
- Handles and assists others in problem solving, problem resolution and problem prevention.
- Demonstrates a good understanding of business analysis tools and methodologies.
- Responds to inquiries and provides status on problem resolution and follows through to ensure completeness and business partner/customer satisfaction.
- Develops, facilitates and leads business analysts in the delivery of business specifications for manual and automated solutions to business problems.
- Develops test plans.

- Analyzes and tests automated solutions to business problems. Also leads business analysts to perform these services. If feasibility/cost/benefit of the automated solution is in doubt, recommends non-automated solutions to business problems.
- Conducts cost/benefit analysis for business systems solutions.
- Supports quality assurance/testing efforts with hands-on support.

Business Consultant – Tier 3

Overtime Status: Exempt

Works independently, delivers business design consulting for automated and non-automated solutions to business opportunities and problems – at a departmental/ multi-departmental and/or full system scope. Keeps abreast of new and emerging business design techniques and makes appropriate recommendations for their use. Empowered to manage the significant business impacts in relation to information technology solutions. Provides advice, consulting, direction and support to business and technology business partners and consultants. Supports business/financial functions which may include budget, rates, forecasting, acquisition, billing and vendor contact. Provides alternatives for business opportunities and problem resolution. Responsibilities include the following:

- Planning the business opportunity definition and design activities.
- Provides consulting support to business partners in defining their needs and strategies. Delivers a business partner/customer advocacy service.
- Recommends solutions and improvements, and provides information to customers on trends in business design.
- Provides continuity from definition of the business opportunity or problem through implementation of the solution.
- Understands the customer's business needs and delivers the desired end product.
- Handles and assists others in problem solving, problem resolution and problem prevention.
- Demonstrates a good understanding of business analysis tools and methodologies.
- Responds to inquiries and provides status on problem resolution and follows through to ensure completeness and business partner/customer satisfaction.
- Develops, facilitates and leads staff in the delivery of business specifications for manual and automated solutions to business problems.
- Translates business needs to process, function and data models.
- Develops, facilitates and leads staff and business consultants in the delivery of business specifications for automated solutions to business problems.
- Facilitates the delivery of user interface, logical application and information models using standard structured analysis techniques.
- Applies conceptual knowledge of industry-proven technologies to the delivery of business solutions. Also understands the impact new technologies have on information technology services' application portfolio.
- Oversees or develops business systems documentation (e.g., application design specifications, logical relational database models [via working with data administrators/DBAs], test plans, training documentation and mini-specs for programming, if needed).
- Leads cost/benefit analysis for business systems solutions.
- Ensures the effective implementation and use of standard corporate service processes such as change management, quality assurance, project management, etc.
- Provides guidance and training to information technology staff.
- Represents the customer in quality assurance efforts.
- Designs test plans, leads business testing teams, reports on testing progress and leads resolution of Q/A problems/repair prioritization.

SECURITY CATEGORY

This category includes job descriptions, which directly involve computer security issues. There are three sub-categories, Disaster Recovery, Security Audit and Security Administration. The four levels of responsibility are:

Security Architect	Tier 4 non unit
Disaster Recovery Consultant	Tier 3
Disaster Recovery Engineer	Tier 2
Security Technical/ Audit Consultant	Tier 3 non unit
Security Technical/Audit Engineer	Tier 2 non unit
Security Administrator Analyst	Tier 2 non unit
Security Administrator	Tier 1 non unit

Individuals in this group generally move into this category from others in the matrix or with prior experience.

Disaster Recovery Engineer – Tier 2

Overtime Status: Non-Exempt

With minimal supervision, assists with the development and maintenance of comprehensive disaster recovery/business resumption plans. Assists with risk assessments. Plans, coordinates, and audits the testing of contingency plans.

Overall responsibilities are:

- Maintain policies and procedures for contingency recovery.
- Assist with risk assessments.
- Maintain contingency plans in a global environment. This includes business and technical operations.
- Maintain test plan guidelines.
- Assist with the coordination and auditing of tests.
- Maintain project management information.
- Coordinate updates with customer base and business units.

Disaster Recovery Consultant – Tier 3

Overtime Status: Exempt

Works independently to ensure that all corporate functions have comprehensive disaster recovery/business resumption plans. Leads teams of business/technical staff and vendors to develop, support, and deliver workable contingency plans. Recommends disaster recovery/business continuation policies and procedures for business and technology groups and performs risk assessments.

Overall responsibilities are:

- Recommend corporate policies and procedures for disaster recovery/business continuation.
- Provides leadership by coordinating all aspects of plan development for corporate groups both nationally and internationally.
- Perform risk assessments and present recommendations to management.
- Work with management in selection of the best solution for recovery of their operation that will also be the most cost-effective choice for our company.
- Assist with recovery services vendor selection and contract negotiations.
- Develop disaster recovery/ business continuation plans that document the personnel and steps to be executed to restore the business function.
- Plan, coordinate and audit tests.
- Act as a consultant for other corporate personnel who are assigned business recovery projects and activities.
- Monitor and maintain project management information.
